# Factsheet
Microsoft Azure Data Assessment

Your challenge

Are you planning exciting IoT, data science or ML /AI use cases and need a sound target architecture to analyze data for this?

Do you use classic BI software and wonder how you can cover new requirements such as high scalability and real-time analytics?

Would you like to learn how modern cloud-based data & analytics architectures support your business so you can reduce costs?

What you receive

Recording and analysis of the use case and the requirements of workshops

Elaboration of an architectural proposal based on Microsoft Azure analytics & data

Performing a Mini-PoC with Microsoft Azure analytics & data functionality

Roadmap with architectural proposal and concrete implementation recommendations

Scope

Microsoft Azure Certified

5 days of consulting for your analytics & data use-case, conducted by our Azure Data & Analytics Experts

Client examples

- Hybrid on-prem / Azure data lake architecture for The **quality management** of a production company

- Azure **DWH & BI architecture** for the IT service provider of a major Swiss city administration
