With the use of Microsoft **Azure Synapse** and Sword's best practice blueprints, we can deliver a single modern data platform supporting both BI and AI.

Within minutes of being setup in Synapse, you can analyse, transform, and consolidate data across multiple sources and start analysing with the help from tools such as Microsoft Power BI and Azure Databricks.

Sword will use their **blueprint data sets and Power BI reporting templates** supporting Finance, HR, Payroll, and Oil & Gas. We deliver high pace outputs at low running costs.

1 Our design and industry standard best practice blueprint will ensure that your business has consolidated reporting across all sectors presented as modern dashboards with security and usability as key importance factors.

2 The introduction of a single modern data platform as a strategy, that meets your business requirements today and that can be easily extended to support your future roadmap across your business.

3 The importance of **A**ppropriate, **A**ccurate, and **C**omplete data consolidated across all your applications and data platforms providing end user confidence in reporting.

4 Implementation of end to end automated pipelines supporting data ingestion, transformations, and multiple data source alignment.

5 Agile delivery methodology with high pace outputs at low running cost, putting business expectations and needs at the forefront.
