

# Work from Anywhere with Microsoft 365

Organizations are adjusting to the new reality of ‘mixed’ remote work. Microsoft has solutions so your organization can continue to run efficiently, regardless of where, or what, work needs to get done. SyCom and Microsoft are here to help you continue to move forward.

## Security First

Working remotely introduces new security challenges. With dispersed workers, shared documents, and employees accessing files from diverse networks, it can be hard to ensure information remains safe. The **Microsoft 365** security portfolio—Intune, Azure AD Premium, Azure Information Protection, Advanced Threat Protection—can help you work remotely without compromising security or compliance, from securely managing all of your devices, to controlling how users access data, to protecting documents with persistent labeling and security.

## Collaboration

People need the ability to collaborate from anywhere, knowing their virtual meetings are private and secure. With **Teams**, you can collaborate from anywhere with any device and shift between chat to video conferencing with the touch of a button. You can share and edit Office documents, run surveys to gauge team morale, and collaborate on a whiteboard in real-time.

## Virtual Workplace

Employees require constant connectivity, better flexibility, and user personalization to continue to stay productive in this new normal. **Windows Virtual Desktop** modernizes your workforce to work how they want, where they want. Users can securely use their favorite devices to access their desktop environment, easily transitioning to anywhere with an internet connection. **Windows Virtual Desktop** was born in Azure, allowing secure sign-on and Multi-Factor Authentication to come standard.
