Microsoft 365 Value Calculator

= SyCom
Connected.

Business and Enterprise IT solutions can often become a mess, with products and vendors overlapping or proving to be confounding to license or pay for. The **Microsoft 365 Value Calculator** helps customers stay on top of their IT solutions by showing a clear picture of what you want from your products and how Microsoft can get you there and save on your IT overhead.

With the **Microsoft 365 Value Calculator**, we can conduct a review of all the products and services you own from each vendor and enter that into the calculator. After combining licensing, purchasing, and agreement info for each solution and adding the current or applicable Microsoft licensure on your tenant, we are ready for a review.

Microsoft 365

The **Microsoft 365 Value Calculator** provides customers with two invaluable reports:

1 REPORT ONE

The first shows all products that are overlapping or end of life products in the environment that can be removed or consolidated.

2 REPORT TWO

The second and most valuable shows the customer the Microsoft equivalent of each product that they already own and how that product compares to the competitor.

THREE-YEAR OUTLOOK

This value calculator will also give you a three-year look at your IT environment and provide a cost-benefit analysis of consolidating your licensing and solutions package to a Microsoft 365 offering.

This tool not only allows you to view the entirety of your solutions on one single pane but shows how to save you money on your IT overhead by switching to Microsoft 365. SyCom is happy to offer this review as a complimentary service to all of our customers to help them feel comfortable with their existing IT solutions.
