

Symity DRaaS

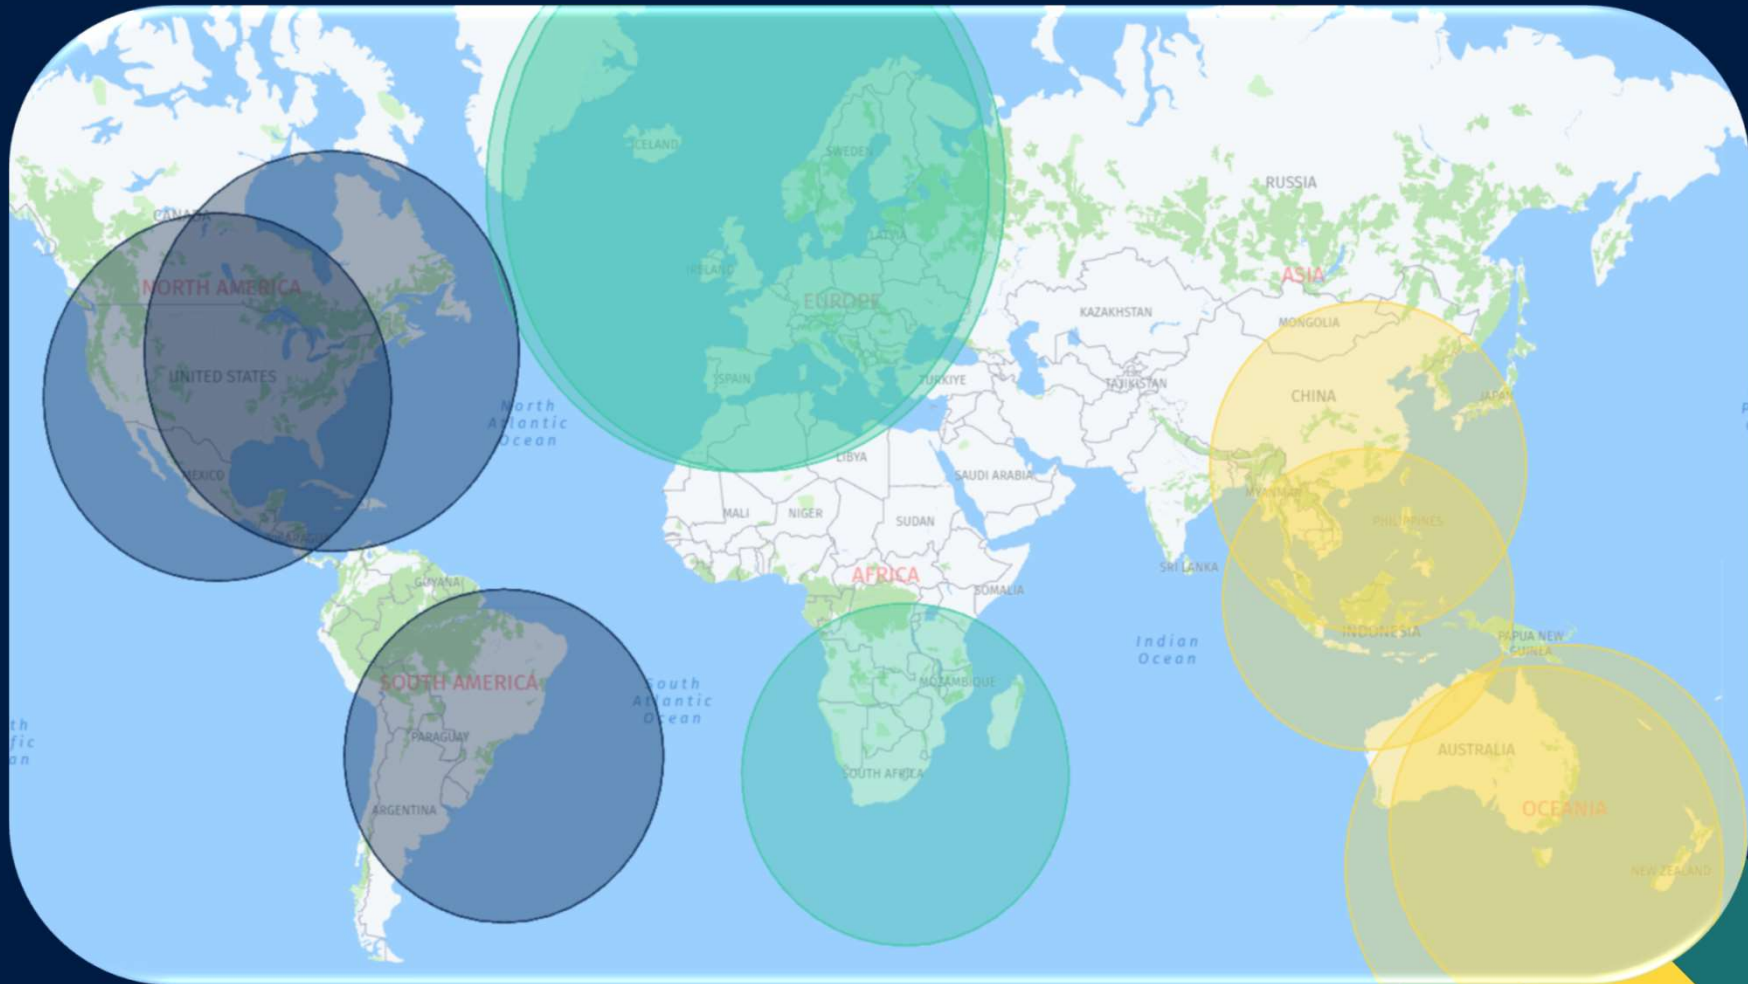

What are the deployment options?

- Symity DRaaS runs in all major regions, with each region having a minimum of one geo-resilient pair of SBC's.
 - Americas (Resilient Clusters in both North and South America)
 - Asia
 - Australia and Oceania
 - Europe & South Africa
 - *Middle East largely excluded due to restrictive Telco Legislation*
- Currently we offer several DRaaS Packages for the following reasons:
 - To cater for the technical needs of the clients (e.g. Complex Routing or Security Concerns)
 - The ability to absolve ourselves from global telco reseller regulation by offering the client the ability to bring their own carrier (BYoC)
 - *The Customer contracts directly with a local or global Telco (e.g. PureIP or SwissCom, we manage the technical relationship within both delivery and support*
