

# Enhancing Identity & Access Management

## Featuring My App Packages

In today's evolving workplace, collaboration and flexible access to resources is more important, and more challenging, than ever. before Organizations are seeking better ways to help both remote and on-premise staff do more, while controlling access based on risks and intelligence.

Synergy Advisors, a leading Microsoft Gold Partner and developers of the E-Visor for Teams App, has now incorporated a new My App Packages feature into the application, focusing on identity and access management, solving one of the main issues many organizations face: how to **provide Access Management to users, based on profiles or roles**. The E-Visor for Teams App is a collaboration and analytical Teams-native app, tested by top 100 financial organizations, designed to improve security and productivity at the end user level.

### Access Management Challenges:

- Make it easy for the right people to have the right access to resources
- Easily request and approve requests, with proper context and information
- Remove access to resources when it's no longer required

### How My App Packages + Teams work together

My packages	My active packages	My expired packages	Resource details
16	2	0	7

#### Simple 2-step process:

1 Download E-Visor for Teams App from the Teams App marketplace

2 On My app packages section, get access to your packages:

**My Packages** – User requests packages based on profiles

**My active packages** – See and remove active packages

**Resource details** – See resources access details

**Package Approvals** – Who, type, state, due date

Communications package	Package for members of the Communications	Add...
------------------------	---	--------

Manufacturing Package	Package for members of the Manufacturing department	Remove
-----------------------	---	--------

Microsoft 365 Teams Group | SharePoint Online Site | Security Group | Application
