

BUSINESS-DRIVEN ANALYTICS AND REPORTS FOR SECURITY AND PRODUCTIVITY

CHALLENGES IN THE INDUSTRY

58%

of remote workers make choices which reduce security*

*Microsoft Digital Defence Report 2020

USD72

The average cost to an organization to reset a user password*

*Forrester report

Sensitive information is traveling inside and outside organizations with no control or monitoring, resulting in security risks. A tool that brings analytics and monitoring is essential to know who, what, when, and where organizational resources are being used.

INTRODUCING E-VISOR

Analytics tool which complements Microsoft cloud technologies focused on:

Adoption

Service usage

Security

Best practices

HIGHLIGHTED FEATURES

Collection and correlation of logs and events from M365 services and other sources

Extended log storage to improve security and compliance

Over 160 data sources in a single dashboard designed for the enterprise

Complete view of identities, devices, applications, and cloud information in a single dashboard

REAL-TIME VISIBILITY

Simple and dynamic web-based user interface captures data from over 160 different sources, simultaneously simplifying, and enhancing reporting and analysis.

QUICK AND EASY CONFIGURATION

Easy administration and interaction. Customizable reports for business and technical audiences based on Power BI, provided by AI capabilities.

ACHIEVE SECURITY AND COMPLIANCE REQUIREMENTS

E-Visor reports help organizations achieve compliance and governance policies and requirements. Take control of how your data is managed.

AN E-VISOR FOR EVERY NEED

NEW ASSESSMENT OFFERING!

E-VISOR FOR DATA GOVERNANCE

Scan, discover, and protect unstructured, or structured or both!

BENEFITS

FOR IT

-  Captures data from over 160 sources, simplifying the identification and investigation of problems in the organization.
Reduce weeks to minutes.
-  Ingests information from geo-location services, Active Directory, and more for a complete view of your organization.
Comprehensive reports while reducing admin permissions
-  Critical information about the usage and configuration of Microsoft 365 services for visibility, security, and compliance.
Ensure compliance with relevant regulations and policies.
-  Secure long-term storage of logs for analysis and trends, going beyond the 90-day default view.
Trace anything that happened in the past.
-  Monitors DLP and workflow policy rules with 100% visualization for managers and IT.
Verify that critical information stays in your organization.

FOR MANAGERS

-  Analyzes the adoption of Microsoft services and products by the organization and evaluate the return on your investments.
Validate how your investments in technology are providing value.
-  Reviews the Who, What, When and Where to provide a total 360-degree view of your organization
Remote work under control.
-  Detailed error information enables support to quickly diagnose and respond to issues.
Problems solved in minutes instead of weeks.
-  Take control of how your data is managed.
Ensure compliance with relevant regulations and policies.
-  AI helps manage best practices and provide automated business-level reports.
Be smart; be fast.
