Identity Airlift

Protect your business with Azure Active Directory

Azure Active Directory (AAD) is an enterprise identity service that provides single sign-on and Multi-Factor Authentication to help protect your users from 99.9% of cybersecurity attacks.

Our Identity Airlift is designed to provide you with an overview of AAD, answer any questions, and demonstrate how it can provide real cost savings compared to competitive solutions as well as provide you with an implementation plan to meet your identity management needs.

Why should you consider Azure Active Directory?

Connect all your apps with single sign-on (SSO)

With AAD, users can conveniently access all their apps with SSO from any location, on any device, from a centralized and branded portal for a simplified user experience and better productivity.

Protect your users and data by governing access

With MFA and Conditional Access, secure your users, govern access with intelligent conditional access policies, continuously monitor threats, and take appropriate action.

Unified identity management

Provision and manage all identities and access to apps from one location, whether it be on-premises or in the cloud to improve visibility and control.

Privileged identity management

Manage, control, and monitor access to your resources. Includes just-in time and time bound privileged access, access review and auditing capabilities.

What's included in the Identity Airlift?

Take your identity management capabilities to the next level. In this workshop, we will:
- Lead a comprehensive discussion showing you how AAD can improve your security position while reducing the overhead of managing multiple identities and less comprehensive IDAM solutions.
- Review security scenarios with interactive demos demonstrating how AAD is the identity management solution that best meets your needs.
- By using industry leading discovery tools, assess the maturity of your identity estate and benchmark the maturity level against others in your industry.
- Provide a clear roadmap and actionable recommendations for next steps for improved identity management and governance.
