Securing Identities Workshop

Workshop highlights

Get a rating of your identity security posture & see how it compares to your peers.

Gain insights into apps used in your environment – even ones unsanctioned by IT.

Understand how to prevent identities from being compromised.

Reduce costs & improve business agility & security with simplified app access.

"Identity and threat protection are high on customers' minds. Getting identity right is a critical part of a Microsoft 365 project and is the first place we start."

—Forrester 2020 Microsoft 365 Enterprise Total Economic Impact Study

Are you aware of suspicious user and sign-in behavior in your environment? Are you threatened by ongoing suspicious requests?

Protect user identities

Organizational barriers are blurring between who is in and out of your network. Cloud apps and the increasing use of personal devices and remote work mean that data is no longer centralized behind traditional network security.

This workshop will show you how to stop tomorrow's data breaches by securing identities today.

We will help you find identity risks happening now in your environment, gain insights on your application landscape, and improve your identity security posture.

Why you should attend

Given the complexity of identities, data, apps, and devices, it's essential to learn how to ensure the right people are accessing the right information, securely. In this workshop, we'll show you how identity is the fundamental pillars of an integrated security philosophy and end-to-end security strategy. By attending, you can:

Optimize identity

Identify potential risks related to identity and see opportunities for improvement.

Assess security posture

Receive a rating of your identity security posture and see how it compares to similar organizations.

Reduce expenses

Minimize expenses associated with password reset and helpdesk resources.

Increase visibility

Get a sample survey of apps your employees are using and if IT supports them or not.

What to expect

The foundation of cybersecurity is to quickly and accurately identify authorized users and give them proper access to the information and tools they need to do their job.

Our goal is to provide you with tools to protect your authorized users' identities so you can authenticate credentials and manage file access while still giving users the freedom to collaborate with others.

We'll work with you to:

- Understand your identity goals & objectives
- Define your existing & desired identity security
- Provide insights into apps used within your environment (sanctioned & unsanctioned by IT)
- Showcase core IT & user security scenarios through demos
- Develop a joint action plan based key results, recommendations & next steps

We'll customize the workshop based on your organization's needs

Engagement set up:

- Secure Score
- Application Discovery

Design & planning

Customer value conversation

Key results, recommendations & next steps

Demos

Why work with us?

When it comes to identity and access management, you need an experienced partner. Synergy Technical has a long history of delivering successful cloud and on-premises security solutions to customers. With experience in all 50 states and 70+ countries, we have the technical expertise to get you up and running fast.
