Overview

Windows and Mac Endpoints

Microsoft 365

Pricing

## Centralized protection for business workloads

Back up and manage data stored on Windows PCs and servers, Mac devices, and Microsoft 365 cloud services from an intuitive console.

## Flexible backup options

Secure mission-critical data effectively with highly configurable features tailored to businesses.

OS	Device Name	Backup Policy	Backup Status	Last Backup Time	Next Backup Time	Used Space

### Granular restoration

Restore entire devices with bare-metal recovery, or individual Microsoft 365 objects with file-level recovery.

### Flexible scheduling

Automate data protection and avoid service disruptions with time or event-based backups.

### Customizable retention

Retain as many backup copies as required or according to regulation.

### Efficient protection

Minimize bandwidth usage and storage consumption by backing up only changed data.

### Custom permissions

System administrators can manage and separate user roles as well as control backup and restore permissions.

### Active monitoring

Receive email alerts in case of abnormal events so you can keep backup tasks running smoothly.

## Enterprise-grade security and reliability

Shield corporate data against unauthorized access and data loss.

### Private key protection

Lock backups away with private keys to ensure that no one other than your organization has access to them.

### Industry-standard encryption

Backed up data is protected through client-side AES-256 encryption before it is uploaded to C2 servers.

### High data resiliency

Your data is protected on servers with 99.99999999% data durability. [Learn more](#)

## Comprehensive protection for Windows and Mac endpoints

Enterprise-grade backup and restoration for deployments of any size.

## Customer stories

See how these organizations achieved more with Synology.

"With C2 Identity, not only can we manage employee accounts more centrally but also set up their devices more easily in less time."

Tong, Office Manager, SAT Knowledge

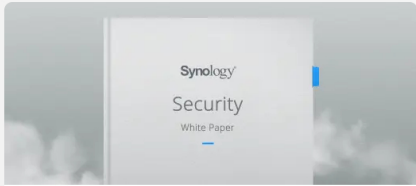

"Synology C2 provided the best backup solution for our situation (Microsoft 365 Exchange Email for over 1,500 users). Compared to other systems that are complex and expensive, C2 occupies a sweet spot, providing great technology at a great price point."

Andrew, Executive Director of Information Systems/CIO, East Aurora School District
