

Azure Networking for RISE with SAP

Implementing RISE with SAP comes with complex IT networking tasks like integrating on-premises and cloud systems, ensuring data security, and optimizing network performance. This Syntax briefing can provide expert guidance, tailored strategies, and best practices to help manage these challenges effectively.

Azure Networking for RISE with SAP

Overview

Guidance

Approach

Best Practices

2-Hour Briefing

The Challenge

As organizations transition to RISE with SAP on Microsoft Azure, they must continue to manage various applications across Azure, on-premises, or other hosting environments. Ensuring optimized and secure connectivity between these applications, as well as linking offices, factories, and remote access points, presents a significant challenge.

The Solution

To address this, Syntax offers comprehensive advisory services to help organizations build robust connectivity, establishing Microsoft Azure's cloud services as the networking hub across multiple platforms, including on-premises systems, Microsoft Azure, SAP SaaS solutions, and RISE with SAP.

Briefing Deliverables

- Overview of available Microsoft Azure networking solutions for RISE with SAP
- Comparison of Pros and Cons of the different solutions
- Guidance how to choose the best approach for the customer
- Syntax Best Practices
