Cyber Security Assessment Consulting Service

What Cyber Security Assessment is about:

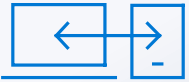

Widespread digitalization and the increase in the number of IT technologies used by organizations around the world pose a critical challenge for organizations: providing a high-quality cybersecurity level. Organizations are looking for a way to qualitatively assess the level of resilience to cyber threats, as well as to plan a plan to strengthen the resilience of the organization to the growing cyber threats in the future.

The Cyber Security Assessment Tool (CSAT) provides an idea of vulnerabilities, as well as a roadmap for increasing the level of cyber protection of the organization.

The final report is based on [CIS 20 Controls](#), established by [Center of Internet Security CIS](#) (USA).

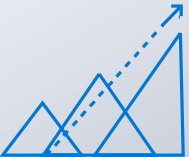

Cloud Services – Managed Service Provider and Azure Expert MSP – helps organizations to scan all the infrastructure, collect the results and provide them with final report and step-by-step recommendations.

WHAT WE OFFER:

Automated data assessment

Scanning all the endpoints and other systems in the network, Active Directory and Azure AD, Office 365, SharePoint Online, Teams and Intune

Interaction

Collecting relevant information through with a questionnaire

Assessment results

Providing the final report and corresponding advices, documentation

Cloud Services

CSAT Assessment Benefits

DEFINE YOUR CYBER SECURITY ROADMAP - GAIN INSIGHT INTO YOUR SECURITY STATUS. THE CSAT PROVIDES THIS INSIGHT THROUGH AUTOMATED SCANS AND ANALYSES. THIS DATA PROVIDES THE BASIS FOR YOU TO DEFINE PRIORITIES AND GIVES YOU THE INPUT YOU NEED FOR A ROADMAP TO IMPROVE SECURITY

INSIGHT INTO THE 'TECHNOLOGY GAP' – LEGAL REGULATIONS ALWAYS INVOLVE BOTH ORGANIZATIONAL PROCESSES AND TECHNOLOGY. THE CSAT WILL DEFINE WHICH TECHNICAL MEASURES YOU CAN TAKE TO COMPLY WITH THE REQUIREMENTS OF GDPR.

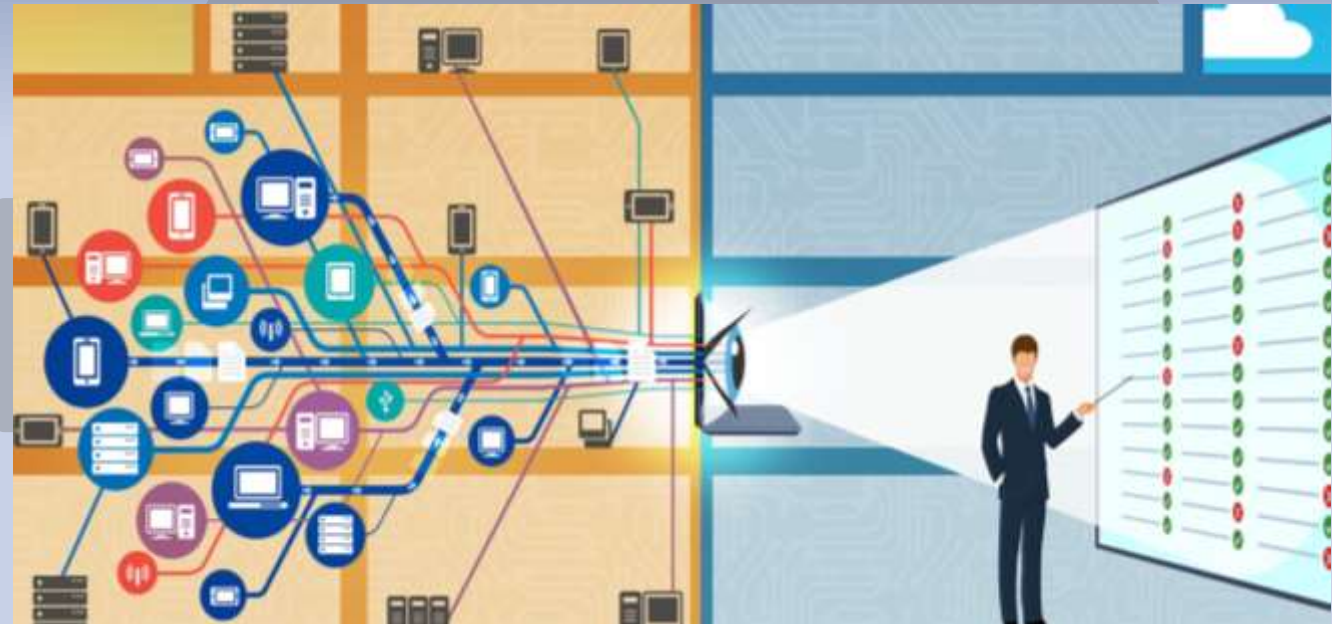

SECURITY IMPROVEMENT RECOMMENDATIONS – THE CSAT WILL IDENTIFY AREA'S REQUIRING ATTENTION AND RECOMMEND ACTION TO BE TAKEN.

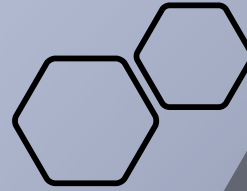

Cloud Services

Service includes the following

- Scanning all endpoints and other systems in the network
- Scanning the Active Directory and Azure AD
- Scanning Office 365, SharePoint Online, Teams and Intune
- Collecting relevant information through with a questionnaire
- Providing the final report and corresponding advices
- Documentation

WHAT OUR CUSTOMERS SAY

Cloud Services

"We were looking for a way to check the security status quickly and simply. Also, to get insight into our vulnerabilities, based on data from the infrastructure and Office 365. With the solution provided by Cloud Services, we automatically scanned all the infrastructure to reveal the weak sides. Also, based on the scan results we got absolutely clear step-by-step instructions on how to significantly increase the cybersecurity level in the shortest time."

– Serhii Smoktiy, CTO at Delivery Group

Cloud Services

About Us

> **9** years experience
with Azure Cloud

> **100** migrations to
Azure Cloud SMC,
Enterprise clients

80% of staff are
Microsoft Azure
Certified

Status of Microsoft
Azure Expert MSP, DPR
audited in 2019

> **3500** VMs in cloud ops
service and support

> **200%** YOY Azure
Consumed Revenue
'19/18, '20/19

Customers from **10**
countries and CSP
agreement open for 92
countries

In 2020 gained **two**
Microsoft Advanced
Specialisations in Win
Server & SQL Migration
& Apps Modernisation
