

Cloud Services

Sales Pitch (ENG):

Widespread digitalization and the increase in the number of IT technologies used by organizations around the world pose a critical challenge for organizations: providing a high-quality cybersecurity uroob. Organizations are looking for a way to qualitatively assess the level of resilience to cyber threats, as well as to plan a plan to strengthen the resilience of the organization to the growing cyber threats in the future.

The Cyber Security Assessment Tool (CSAT) provides an idea of vulnerabilities, as well as a roadmap for increasing the level of cyber protection of the organization.

The final report is based on [CIS 20 Controls](#), established by [Center of Internet Security CIS](#) (USA).

For whom:

Companies who are willing to find out their current vulnerabilities and improve their cybersecurity level. Applicable for retail, manufacturing, pharmacy, automotive, oil&energy industries. Corporate & Enterprise accounts.

Main benefits:

- x **Define your Cyber Security Roadmap** - gain insight into your security status. The CSAT provides this insight through automated scans and analyses. This data provides the basis for you to define priorities and gives you the input you need for a roadmap to improve security
- x **Insight into the 'Technology Gap'** – legal regulations always involve both organizational processes and technology. The CSAT will define which technical measures you can take to comply with the requirements of GDPR.
- x **Security improvement recommendations** – The CSAT will identify area's requiring attention and recommend action to be taken.

Service includes:

- x Scanning all endpoints and other systems in the network
- x Scanning the Active Directory and Azure AD
- x Scanning Office 365, SharePoint Online, Teams and Intune
- x Collecting relevant information through with a questionnaire
- x Providing the final report and corresponding advices
- x Documentation
