**Syskit Point**

DISCOVER, SECURE, AND CONTROL YOUR MICROSOFT 365

Transform complex environments into easily managed ones with Syskit Point, an intuitive and scalable management platform made by IT professionals, for IT professionals.

Syskit Point

Syskit Point simplifies how you manage Microsoft 365 at scale. Automate governance, secure collaboration, and gain deep visibility into your entire environment.

Discover
Save hours of manual work across admin centers and unify data from multiple M365 workloads.

Secure
Understand and manage who has access to your sensitive data and retain complete control of your environment.

Control
Enforce various policies and manage worskpaces' lifecycle from their creation to the end of life. Syskit Point's powerful engine enables you to apply policies to all workspaces automatically. Avoid sprawl, and regularly clean up inactive resources.
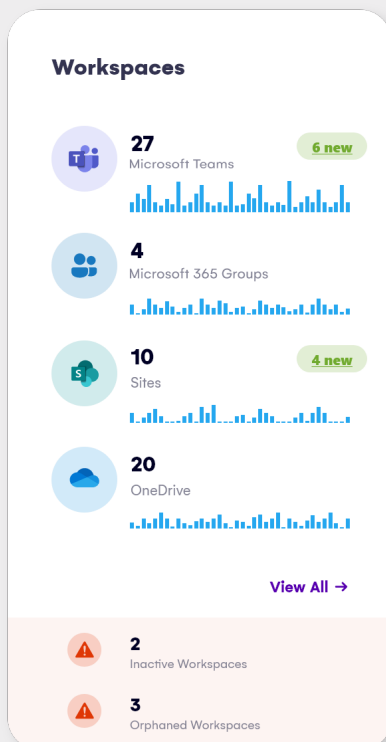

About Syskit

Syskit is a software development company dedicated to creating easy-to-use, state-of-the-art management and governance solutions for Microsoft 365 and providing exceptional support service. Created by IT professionals for IT professionals, Syskit's products have gained the trust of over 3000 enterprise customers worldwide.

DISCOVER: Centralize inventory and gain visibility

Microsoft 365 inventory and reporting

- See all users, structure, sharing, and resources across Microsoft Teams, Groups, OneDrive, SharePoint sites, and Power BI.

- Drill down into user permissions and memberships across Microsoft 365 services.

- Check the owners and members of each Team or Group, add or remove new members and owners, and control sharing.

- Find all external users and guests and detect externally shared content with all sharing links.

- Discover assigned, unassigned, and inactive Microsoft 365 licenses and optimize budgets.

- Always know how reports are shared and used across your entire Power BI inventory.

SECURE:
Audit user activity and boost security

Microsoft 365 auditing

- Secure your cloud from malicious actions by tracking user and admin actions.

- Audit sensitive files activity and stay compliant with various regulations.

- Improve your reaction with timely alerts and real-time updates.

Access management

- Manage who has access to what from one central point. You can remove, add, copy, or transfer permissions for multiple users at once.

- Manage Microsoft Teams and Groups membership and ownership.

- Remove suspicious sharing links and manage external users and guests.

- Restore permissions inheritance on items with unique permissions.

CONTROL: Automate governance and increase efficiency

Lifecycle management and Provisioning

- **Policies and Lifecycle management:** Enforce various policies and manage workspaces' lifecycle from their creation to the end of life. Avoid sprawl, and regularly review and clean up inactive resources.

- **Provisioning and Teams app:** Set up templates for new workspace requests for Teams, Groups, sites, and Yammer with different policies in place. Customize approval workflows and simplify the process for business users and administration via a user-friendly Teams app.

- **Collaboration with end users:** Set up automated access review requests to ensure content owners take care of their workspaces. Team up to avoid security breaches and keep your environment clean.
