

# The IDOT migration tool for a smooth transition to Microsoft Intune

Save time and money when migrating your mobile devices to Microsoft Intune

## What is the IDOT tool from System4u?

IDOT is a migration tool designed for the easy and automated transfer of your mobile devices from existing Enterprise Mobility Management Technology (EMM) to Microsoft Intune.

*"Although some of our employees were afraid of it, in the end, there were only a few that we had to help with the migration. The IDOT tool from System4u is really intuitive, the process of uninstalling and onboarding to MS Intune took each mobile phone user through the entire process step-by-step and it really took only a few minutes."*

## The benefits for you

**Easy for users** – every mobile device user will manage to log out of the original MDM and then onboard into MS Intune themselves.

**Step by step** – the IDOT intuitively guides the user through the entire process.

**Cost savings** – no administrator assistance is required, the whole process is automatic.

**Save time** – the whole process takes a few minutes and the user decides when to start it. Thanks to IDOT, migration takes place without missing users' working hours.

**Monitoring** – the administrator can monitor how the process is going.

**Multiplatform** – it is possible to migrate to MS Intune, for example, from VMware Workspace ONE, MobileIron and other MDM technologies.
