Intune Device Onboarding Tool

IDOT from System4u is an effective tool developed for easy and fast migration from the original EMM platform to Microsoft Intune. Thanks to the automation of the entire process, it saves companies time and costs.

1

Easy for users

Unregistration from the original MDM and onboarding to Microsoft Intune can be easily done by any user.

2

Saves time and costs

The process takes a few minutes and the user decides the date and time. No administrator assistance is required.

3

Advanced monitoring

The administrators can monitor the migration progress from a dashboard and easily identify where a support is needed.

The IDOT switched us to Intune without any loss of users working time

"Even though some of our employees were worried about it, in the end there were only a few of them who needed our help with the migration. The IDOT tool from System4u really is intuitive; it guided every mobile phone user through the process of uninstalling the old software and onboarding to MS Intune step by step, and the entire process didn't take anyone more than a few minutes."

Effective

Every mobile device user will manage to log out of the original EMM and onboard to MS Intune. IDOT will intuitively guide them through the entire process, and the administrator merely monitors its progress.

Step by step

IDOT intuitively guides the user through the process.

Multiplatform

EMM migration and Intune onboarding from VMware Workspace ONE, MobileIron and other technologies.
