This powerful tool is capable of extracting email addresses from corrupt PST / OST files. Not just emails this tool will also extract email addresses from Contacts, Calendar, Tasks, Journal, and Notes. So, go get the [Outlook Email Address extractor](#) now and experience an effortless Outlook email address extraction.

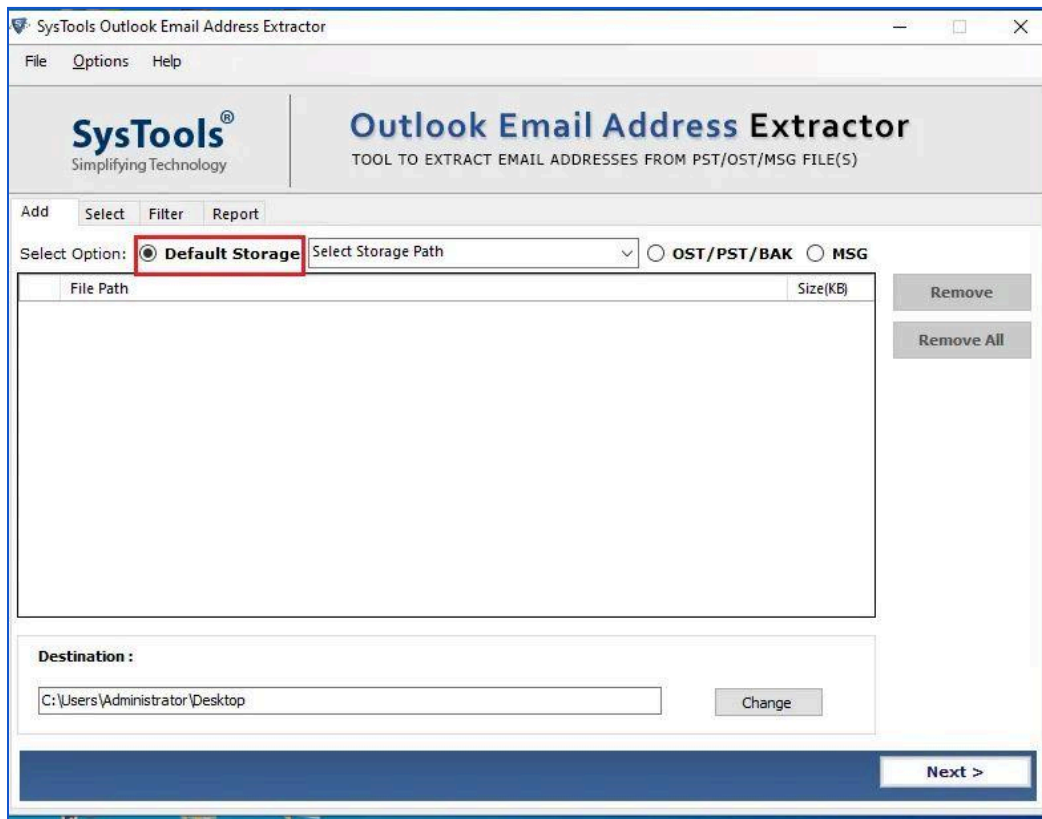

## How to Extract Email Addresses Easily:

Follow the below steps to extract Email addresses from Outlook:

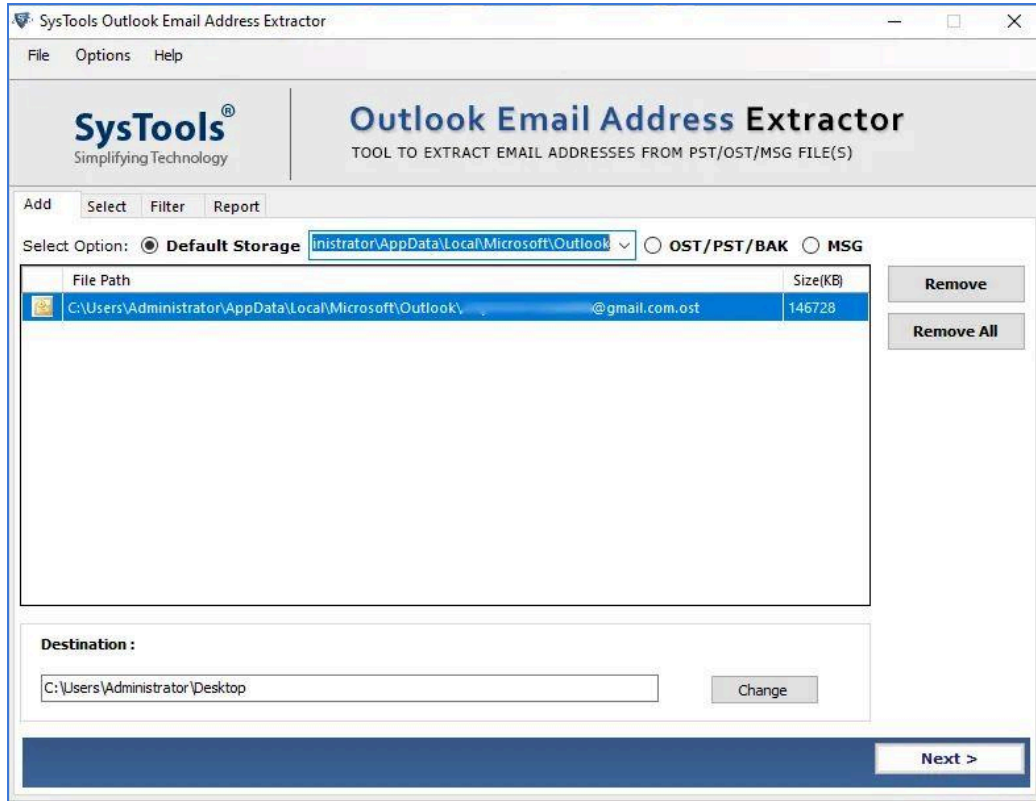

1. Firstly, **Launch the software** on your system and enter your Hotmail login credentials.

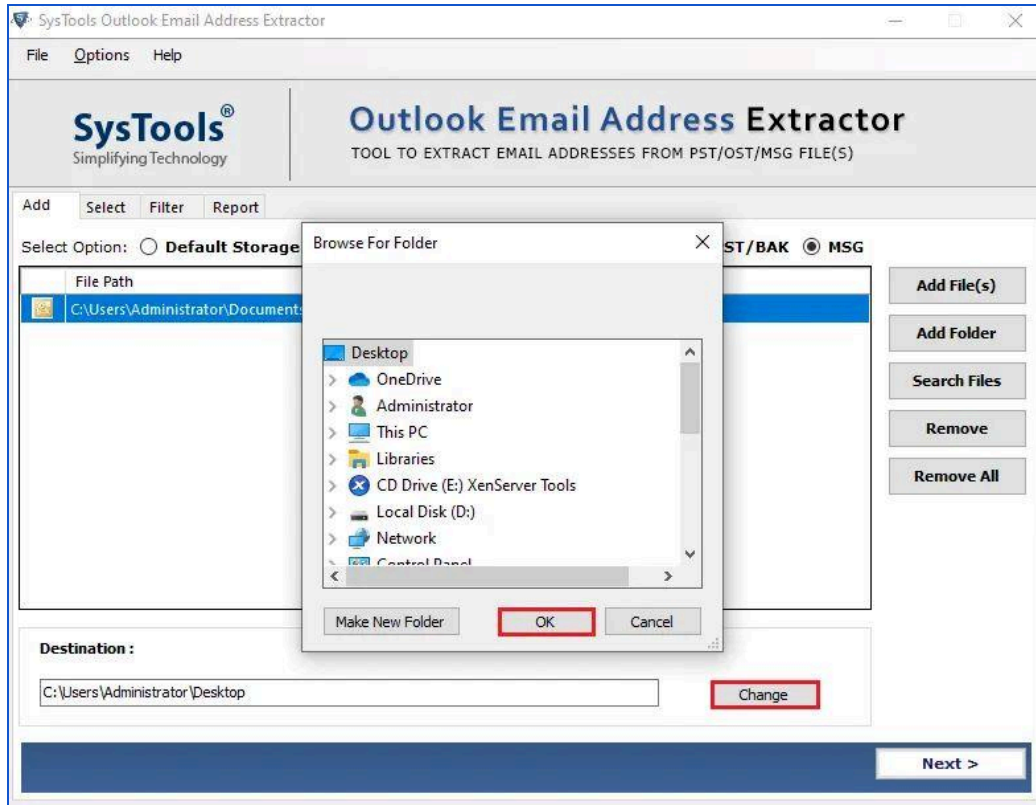

2. To add files choose one of the three options from “**Default storage**”, “**PST, OST, BAK**” and “**MSG**”, For that matter I am selecting Default storage.

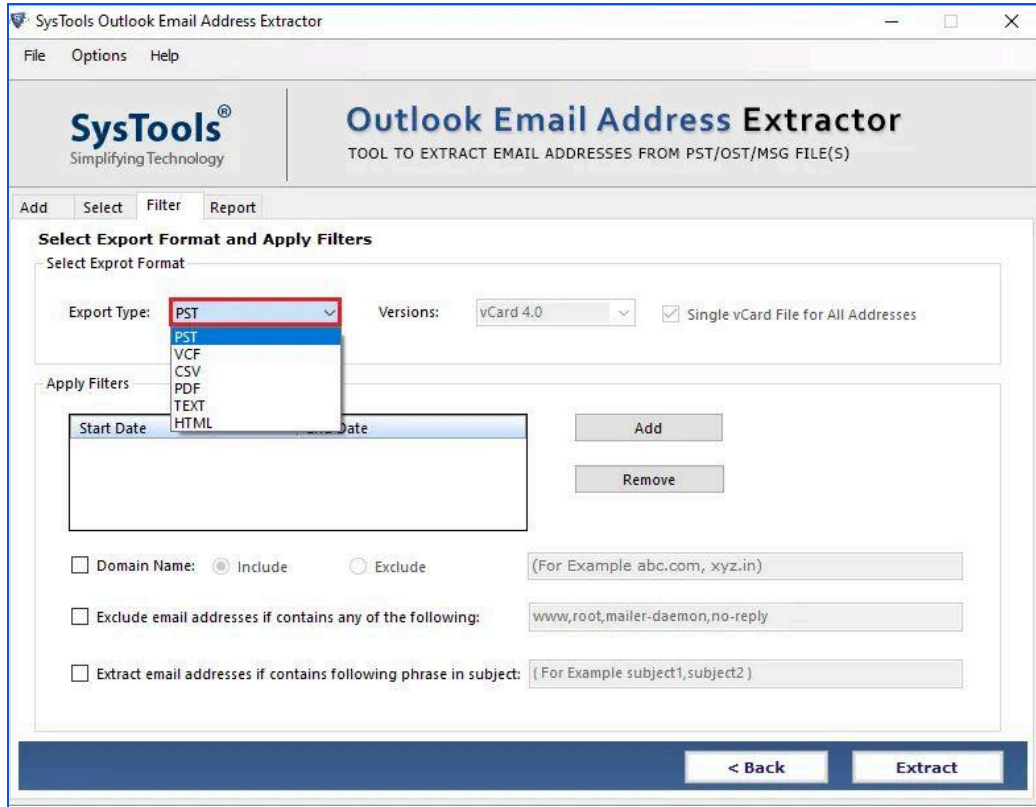

3. Now, **choose the required files** and add into the software pane, preview the added files and remove if wrongly selected.

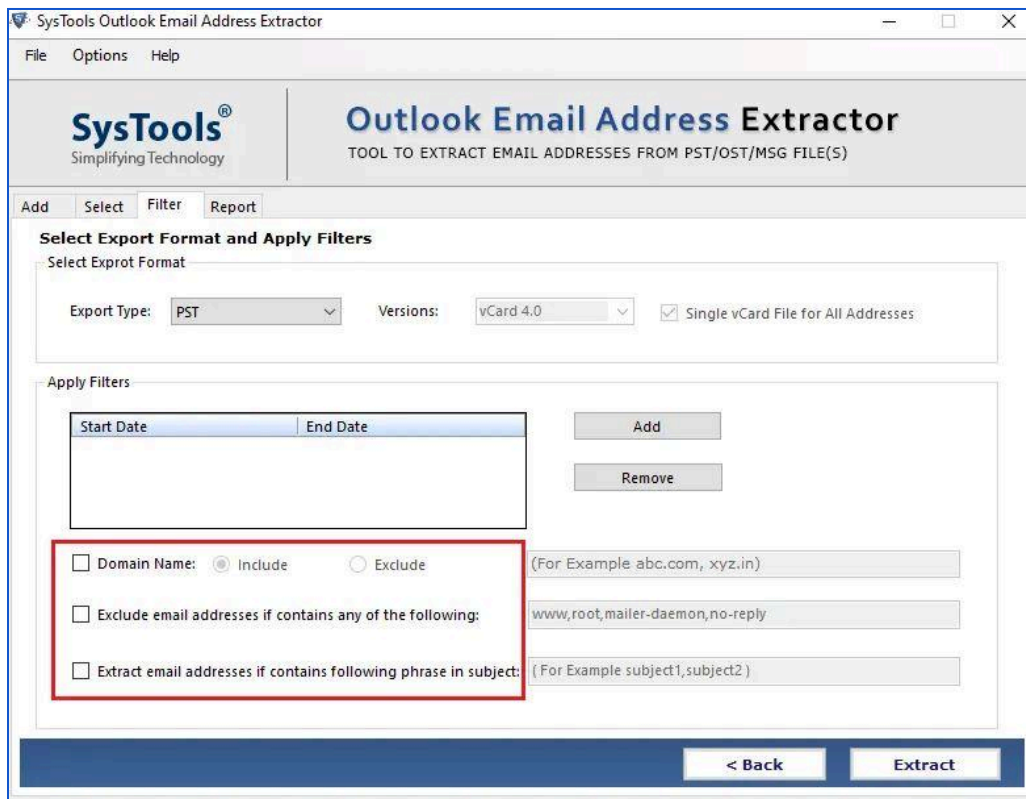

4. Now, **the tool has already chosen its default saving destination** however you can change it according to your preference and click "**Next**".

5. Here, **Choose file saving option** accordingly from multiple saving options. I am selecting PST for that purpose.

6. You can **apply filters** according to your choice like date filter, Domain name, Exclude Email Address, Extract Email Address. Click on "**Extract**".

Now, you can go to your default file saving location and ensure a successful extraction of your Outlook email addresses.
