Steps to Remove Password from PST File Using SysTools Software

All the instructions are listed below, simply follow, and remove password from locked PST file. Visit official webpage and download the utility and then install.

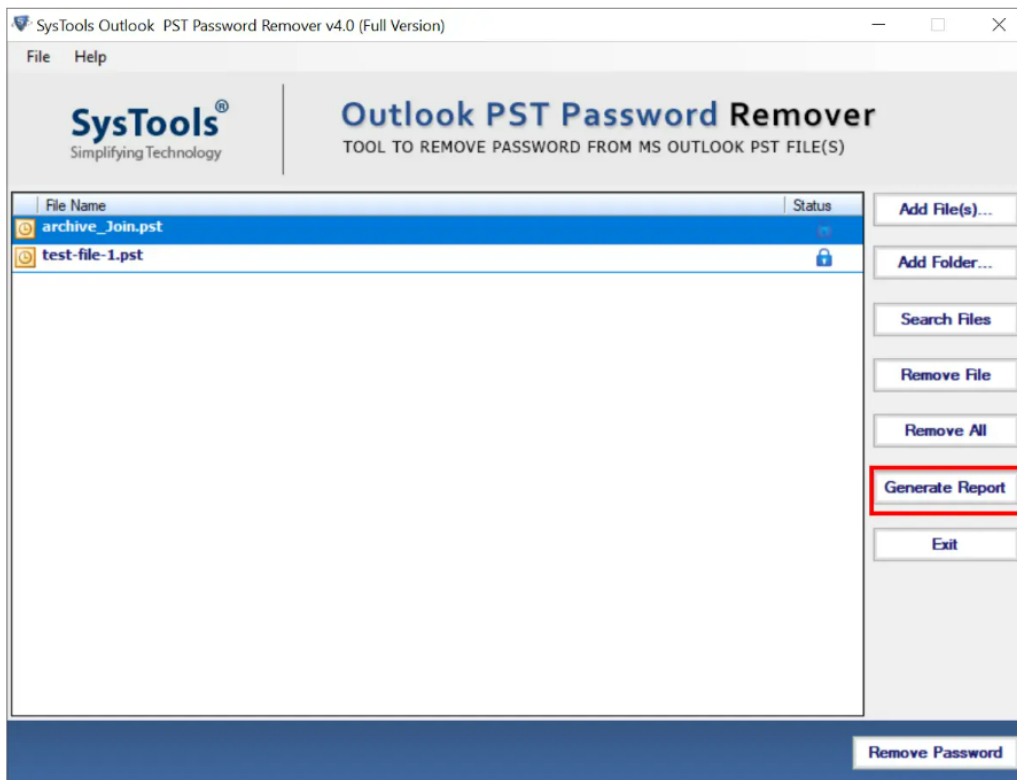

Step-1: First, **download** and **run** the software to remove the password of the password protected PST file. Once the software opens click either on "**Add Files**" or "**Add Folder**" option to browse the password protected Outlook PST files or folder.

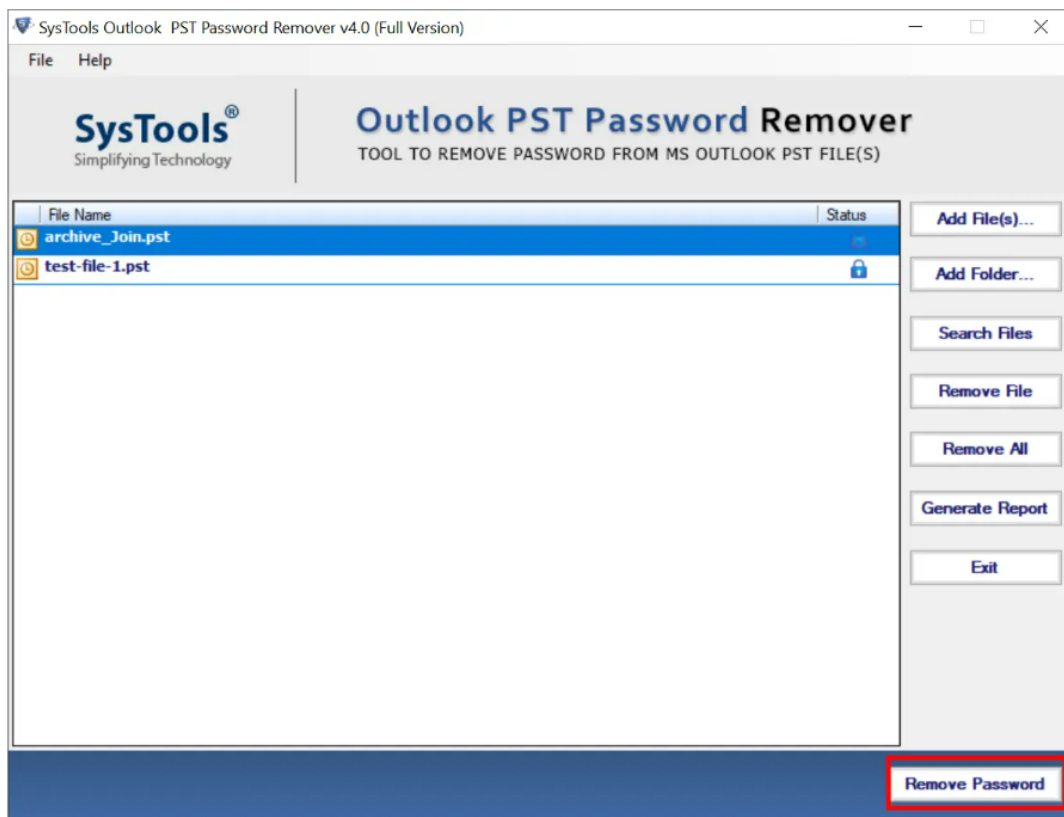

Step-2: Once you added the password protected PST file to the software. It starts representing the PST files and their status on the software screen. This status elucidates about **encryption (Lock Icon)** of Outlook PST Files.

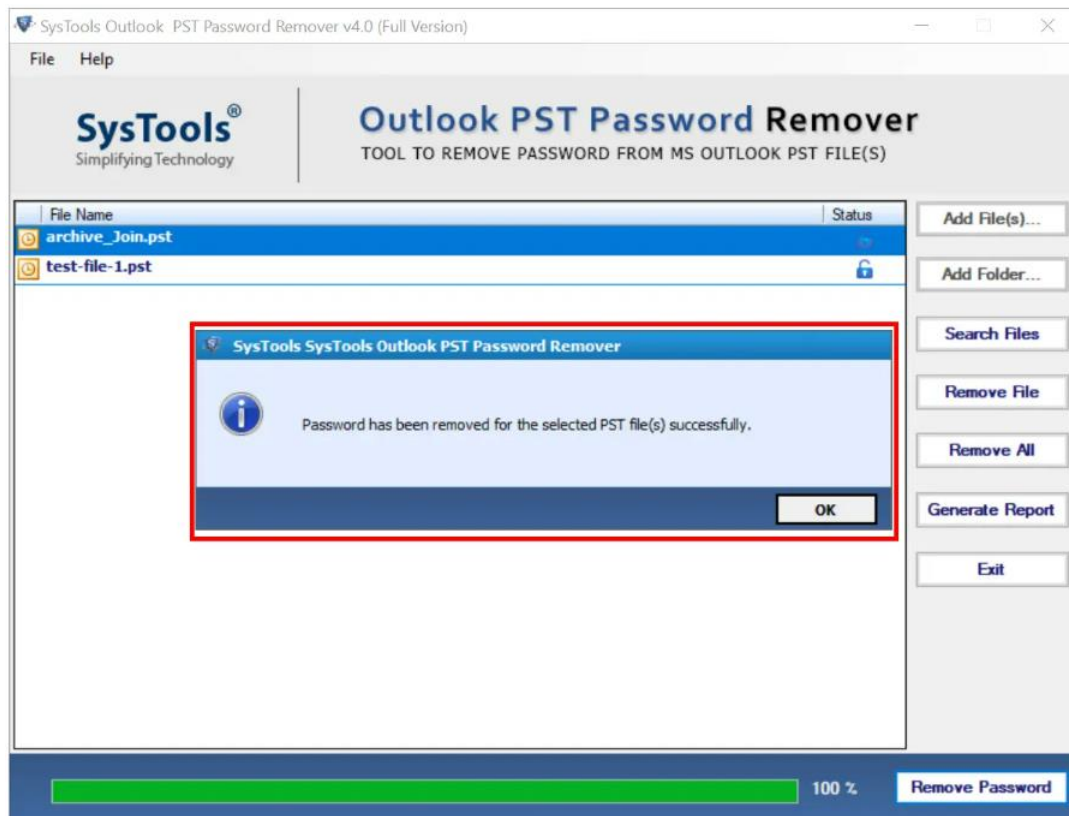

Step-3: The same status report that was appearing on the software panel in last step can be exported and saved into a CSV file by using "**Generate CSV Report**" option.

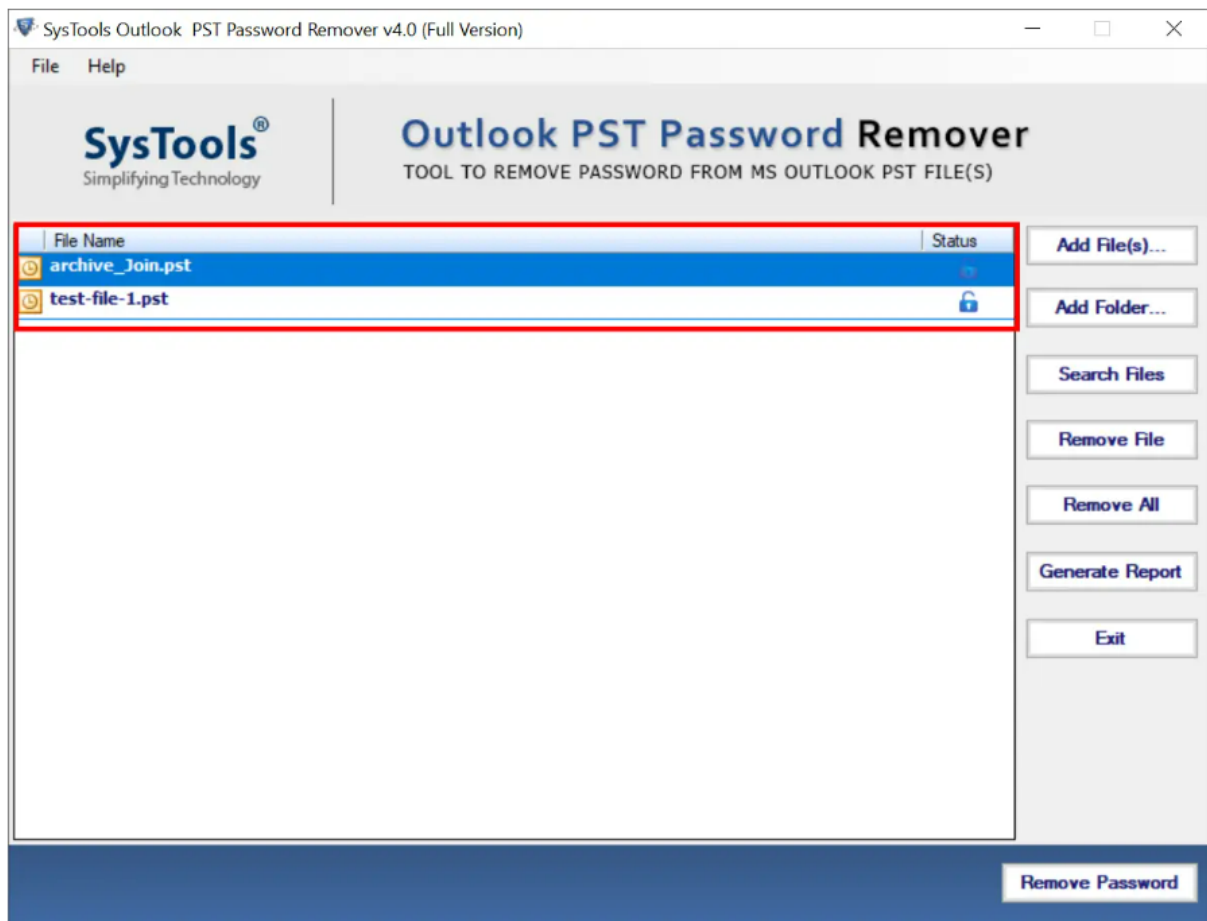

Step-4: At last, click on "**Remove Password**" button and unlock password protected PST files.

Step-5: Once the password is removed from the PST file click on the **OK** button to end the task.

Step-6: After ending the task, you can see the **Lock icon** change into **Unlock icon**.

Final Points

- **Remove PST Passwords:** Effortlessly unlock PST files by removing their existing passwords.
- **Reset Security:** Replace old passwords with new ones for enhanced security if required.
- **Batch Processing:** Unlock multiple PST files in a single operation for improved efficiency.
- **Data Integrity:** Retains the original structure, metadata, and content of the PST file.
- **Compatibility:** Supports ANSI and Unicode PST files from all Outlook versions.
- **Standalone Solution:** No need for Outlook installation to perform the password removal.
- **User-Friendly:** Designed with an intuitive interface for easy operation by all users.

SysTools PST Password Remover Tool is the ultimate solution for unlocking and managing secured PST files, making it an indispensable tool for both individual and organizational users.
