

Managed cloud services for Azure (MCS) in a nutshell

The Solution

T-Systems **Managed Cloud Service (MCS) Azure: The fastest migration of your data center to the Cloud**

- MCS for Azure is a **complete lifecycle management** for any kind of application in Microsoft Azure.
- There are **two services tiers: Foundation and Enterprise Landing Zones**
- **Foundation** forms the **base configuration and deployment of the secured Azure Landing-Zone modules**
- **Enterprise Landing Zones (ELZ)** are **on top** of the foundation layer.
- ELZ provide **cloud adoption teams with a well-managed environment** for their workloads
- ELZ adds T-Systems **operational excellence for the application and its infrastructure** in Azure
- T-Systems **deploy, update and patch applications** in close contact with customers

MCS Benefits

- **Reduce Complexity:** with Enterprise Scale Azure, Architecture, Compliance, Security, Operationalization, Pricing through easy deployment without functionality restrictions
- **Security:** MCS enables compliance with data protection requirements and cost transparency according the requirements of our customers
- **Cloud Native:** Native integration with Azure portal and no delay in providing functionality
- **Simple but different:** MCS are out of the box cloud services which allows customer to focus on faster time to market of (new) business services
- **Transparent:** Company specific cost control/billing options with a simple, good and transparent pricing model and the customer aim in focus

Why T-Systems

T-Systems is 21 times market leader for Cloud and Infrastructure* (2020-2021)

- **T-Systems is a certified Azure Expert Managed Service Provider and Microsoft Gold Partner**
- **You could use our best practices for Security, Resources, Services and Network services**
- **Benefit from Standardized operating processes, Monitoring, Management, 24/7 support & service desk managed by T-Systems**
- **Lower your costs but stay flexible with automation, operational efficiency and economies of scale**
- **Microsoft is the second biggest Hyperscaler and leading in terms of growth and security***

Top Arguments

All-In :

Azure & MCS together offer scalable computing covering different requirements and use cases for all customer

Save costs :

No need to set up own monitoring, skills or service desk

Start to finish :

MCS & T-Systems focus on the complete customer lifecycle.
