Power Automate Implementation: Migration Factory

Move beyond your current RPA solutions and activate your automation potential by upgrading to Power Automate Desktop.

Implementation

Our MNP Digital Migration Factory allows you to cost-effectively migrate your existing RPA solutions to Power Automate Desktop (PAD) quickly and easily. The Factory leverages the Blueprint RPA Migration tool, paired with our team of RPA experts, to perform the migration below the cost and effort of a completely manual engagement. It's also scalable, with the option for a small bot migration (up to 300 actions), a medium bot migration (up to 600 actions), a large bot migration (up to 1,000 actions), and the ability to purchase a set to access bots with as many as 25,000 actions.

Additionally, to streamline the process we will provide a report that outlines the actions the tool can migrate and those which require manual intervention. From there, our team will walk you through the report and create an action plan for activating your RPA in Power Automate Desktop.

Key benefits

At the end of this engagement, you will have the following:

- Introduction to Power Automate Cloud Flows
- Power Automate Desktop setup
- Setup and configuration of the Blueprint RPA migration tool in your environment
- Walkthrough of the Blueprint RPA migration tool and Power Automate Desktop features
- Migration of up to 25,000 actions

What's included

To be tailored to your organization's needs.

	1. Current State Documentation	2. Migration with Blueprint	3. Deployment
Objectives	• Ensure the RPA is working as expected • Understand the key features and value of the RPA • Perform test migration	• Perform the migration • Manual intervention planning • Implement Application Life Cycle Management (ALM)	• Deployment into production • Sustainment plan
Activities	• Demonstrate a complete run of the RPA to facilitate knowledge transfer and ensure the bot is working as expected • Read through documentation, note any discrepancies • Note performance issues and/or areas for improvements	• Run the migration tool and analyze the output report • Resolve migration issues • Complete the manual migration steps • Deploy the solution to your test environment, and support your testing process	• Perform the deployment into production • Perform functional testing • Plan and document sustainment process
Deliverables	• RPA documentation • Migration plan • Test plan	• Migration documentation • Deployment documentation	• Deployment documentation • Training materials • Recommendations and roadmap
Timing	• 1-2 Weeks	• 6-8 Weeks (per medium bot)	• 1-3 Days (per medium bot)
Team	• Principal Consultant (PT)		

Our scalable team of expert advisors, problem solvers, and builders ensure you receive the specific skills and guidance you need to get the most out of your digital investments.
