

Windows Virtual Desktop Proof of Concept

Introduction

Windows Virtual Desktop (WVD) service is an Azure based offering that provides Windows desktops to a variety of remote devices. With the increasing challenges of security and data governance, there has never been a better time to consider how combining virtual desktops with your existing desktop strategy can be used to decrease costs and increase user agility. WVD represents the 4th generation of remote desktop technology and this new approach offers cloud-based scalability and significant cost reductions.

Providing virtualised desktops and Office365 to your users can solve several significant issues including.

- User agility, use any device to provide a fully functional, full size desktop environment
- Centralise security and governance challenges
- Manage Windows 7 dependencies
- Enhance/simplify existing virtualised desktop deployments

This 4 week proof of concept allows organisations to understand the value of implementing virtual desktops into their environment. We assess, plan, deploy the solution and then provide support and guidance throughout the whole process.

Core deliverables

We provide a completely usable pilot solution which includes;

- Creation & configuration of the Azure Tenant or extending your existing one
- Configuration of the WVD management environment
- Setup of Azure Active Directory connect & hybrid domain join for devices
- Deployment of the FSLogix profile management solution

- Building of a multi-user Windows 10 pool
- Packaging and delivering of 3 applications
- Provision of base security policies including limited MFA support
- Integration to online services such as Office 365, Teams and Onedrive

Our approach includes

- Creation of success & test criteria workshop
- Requirements gathering sessions
- Delivery of complete environment based on POC success factors
- Post-delivery feedback sessions

Additional elements that can be added

- High performance or Graphics applications
- Security Center
- Cost management
- Monitoring
- Compliance manager
- Cloud app monitoring
