

EdTech Solutions

Custom Digital Assessment Solutions

Remote Collaboration and Learning

Student Management, Finance and Analytics

Talk Think Do are a leading, award-winning, custom software partner that combines software engineering, AI and DevOps to enable education organisations, across both private and public sector, to thrive as modern cloud-native businesses.

We have strong partnerships with Microsoft and Learnosity. The combination of these partnerships with our extensive expertise and experience puts us in a leading position to provide custom digital assessment solutions utilising generative AI to innovative education organisations.

Generative AI is just the latest challenge to organisations trying to keep pace with the accelerating rate of technological change. Many organisations are looking for the agility that comes with developing their own custom solutions. This is where we can help.

We understand the concerns and challenges education organisations face and have strong processes and expertise covering data protection, information security, accessibility and internationalisation. We also offer 24x7 managed application support and proactive system and security monitoring.

We design, build and manage custom EdTech applications for public and private sector organisations, including:

Custom Digital Assessment Solutions

- ✓ Highly engaging, tailored user experiences.
- ✓ Adaptive assessments using Rasche model, custom logic or machine learning.
- ✓ Easy question authoring with generative AI assistance.
- ✓ Full production workflow covering proofing and publishing.
- ✓ Actionable analytics and generative AI reporting.

Remote Collaboration and Learning

It can be a real challenge to providing a genuinely engaging experience remotely and off the shelf solutions such as Teams and Zoom provide a disjointed user experience. We design, build and manage custom web and mobile remote collaboration solutions, seamlessly integrated into existing systems.

- ✓ One-to-one, one to-many and group video and audio collaboration.
- ✓ Highly engaging, tailored user experiences fully integrating other learning tools.
- ✓ Real-time collaboration such as screen-sharing, remote-control and whiteboarding.
- ✓ Wide support for devices and bandwidth and connectivity issues with user's networks.
- ✓ Integration and launch from existing systems without the use of external software or logins for a better user flow.

Student Management, Finance and Analytics

- ✓ Intuitive user experiences built around your ideal processes.
- ✓ Bespoke data models that fit your organisation perfectly and make reporting easy.
- ✓ Timetabling and appointments.
- ✓ One-off and recurring invoicing and automated payments.
- ✓ Actionable analytics and generative AI reporting.

Common Features

We understand your concerns. All of our solutions are built with the following features:

- ✓ Integration with existing platforms and data.
- ✓ Accessibility and wide device compatibility built in.
- ✓ First class internationalisation and localisation support.
- ✓ Cyber security and data privacy protection.
- ✓ Hyper scalability.

Enabling Innovation for Hodder Education

“We’ve been collaborating with TTD on a large digital innovation project, moving to the cloud and to working with a software partner. The team have been exceptionally organised, knowledgeable and pragmatic in helping us take the idea through to project sign-off, kick off and initial development. We have found communication to be clear with a supportive, can-do approach, no matter which team member we’re liaising with.”

Katie Blainey, Director, Assessment Product

THIRD SPACE

Empowering EdTech with Cloud Technology

Talk Think Do have significant experience in supporting EdTech clients through the process of developing their own software, and can provide an expert team to either help you deliver innovative applications quickly and reliably, using cloud native technology, enabling your business to thrive, embedding the support processes and ensuring that you or your third party teams are equipped for the ongoing management, helping you to maximise the benefits of your cloud applications.

Best Practice for The Best Results

We want you to be assured you're in safe hands. We are constantly assessing and adopting the latest best practices and ensure that our team and processes are accredited in appropriate areas:

TOGAF The Togaf Standard

An enterprise architecture standard to design and implement large systems, widely adopted by industry.

Cyber Essentials Plus

A rigorous vulnerability test and audit certifies that our own security is robust.

ISO 27001

One of the most popular information security standards, recognised worldwide.

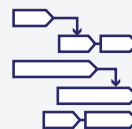

Microsoft Certified

Our technical teams are extensively certified across Azure Development, Artificial Intelligence, DevOps and Solution Architecture.

Data Protection

We have practitioners certified in EU GDPR, UK GDPR and the UK Data Protection Act.

Structured Process

We have honed our own proven delivery process which provides a level of consistency to everything we do.
