

# Azure Application Migration

Tallan will work with you to assess your “as is” application architecture and your ‘to be’ architecture in Azure.  
The approach we take is:

1-2 Week Engagement

## What to Expect

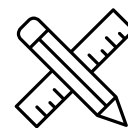

Tallan will work closely with your team to review your on-prem and cloud environments and best practices for deployment to PaaS services in Azure. After our review we will document architectural best practices, concerns and recommendations, as well as how to achieve Azure best practices. Upon completion, your team will have a step by step migration roadmap to move your applications and workloads to Azure.

## During the Engagement

### Agenda

- Review existing application architecture
- Review existing Azure environment
- Review best practices for deployment and app modernization to PaaS
- Create a plan to get to PaaS
- Implement plan with Tallan team.

### Deliverables

- Document architectural best practices
- Document concerns and recommendations
- Create mitigation plan to achieve Azure best practices
- Functioning application in Azure
