Tallan's Security Assessment

Cyber threats are becoming more sophisticated and widespread. Tallan's Security Assessment is an evaluation of your resources and business objectives to audit and develop a fresh approach to your security strategy. In this engagement, we focus on foundational areas that are typically the most vulnerable. We'll use tools like Secure Score to assess your environment and provide education, guidance, and remediation recommendations.

What to Expect

Education & Discovery Workshops

A total of four workshops will cover Scope & Objectives, Zero Trust Framework, Cloud Adoption Framework best practices, and Azure/Office 365 Secure Score.

Assessment Findings & Recommendations

Following the workshops, Tallan will assess and identify security risk, gaps, and areas of concern using Azure, Office 365 Secure Score and other processes and tools. We will prioritize vulnerabilities and review remediation steps.

Review Key Areas

Review and identify unmanaged devices, unsupported operating systems, and vulnerabilities. Facilitate planning with detailed next steps like cost consumption estimates, architecture, timeline, and implementation.

Workshops & Education	→	Assessment Findings & Recommendations	→	Remediation Review & Planning
2 Days		7 Days		1 Day

Schedule time to discuss your needs with Tallan's experts and align best practices for security with your specific business objectives! Contact stan.kennedy@tallan.com to get started.

Experience Talent-Driven Innovation

For more than 30 years, Tallan has solved our client's challenges with custom software solutions. Our strategic insight and innovative process reaches beyond each project to ensure success, and long-lasting partnerships. From data & analytics, apps & experiences to cloud infra & security, the business solutions we develop for our clients run the gamut of bleeding-edge technologies.
