

To make most of Azure platforms and services, Microsoft has many assessment frameworks that provide guidance on making optimal transition to Azure Cloud. Most of the customers are faced with the question of governance of tracking and deploying the recommendations to realize benefits. Towards this TCS has built AI-Driven Well-Architected Assessment platform that helps to highlights strengths, weaknesses and deviations from the Azure Well-Architected Framework and presents the result in a structured report containing met requirement, deficiencies, recommended mitigations. Also helps to manage the lifecycle of the recommendations from creating requirements to tracking the implementation of the recommendations.

Following are the key features:

- Better Visualization of recommendations from Well Architected assessment
- Creation of project plan around the recommendation's implementation
- Integrations with project management systems JIRA / ITSM etc.
- Conversational chat assisted quick reporting.
- Auto Discovery
- AI Assisted quick fix with auto remediation for selected recommendation / Gaps
- Advanced Analytics for enhanced Optimization, troubleshooting and recommendation deployment
