Do You Have an Auto Insurance Fraud Problem?

Detection of fraud patterns and root causes in auto insurance claims is not easy. Fraud exists, but it is time-consuming and difficult to identify what is fraudulent. Using batch machine learning, new fraud cases are impossible to catch. Many different variables need to be used together for effective fraud detection.

Three Main Problems

➢ Detecting Continuously Changing Fraud Patterns

➢ Reducing False Alarms

➢ Learn Root Causes of Fraudulent Transactions

Existing AutoML solutions are trying to help with this but they are still learning from batch data and mostly they just provide feature importances instead of micro-segment level explanations to understand the reason of the output that the system provides.

By using a batch learning system, most probably you will not leverage AI efficiently because it will behave like a rule-based system. But if your model is a self-maintaining model, it will not just detect fraud but also learn from the new claims flagged by claim officers, so model performance will improve accordingly.

Introducing
TAZI Claim Fraud Detection Solution™
in Auto Insurance

Detects fraud patterns, prevents loss of wealth

Using TAZI patented technologies, spend less time on clean claims, detect possible fraudulent claims more effectively.

All this built on **self-maintaining algorithms**, allowing accuracy to be maintained over time with no need for costly maintenance.

Auto-Insurance professionals can now use machine learning **safely** and **easily**.

You can **build your models in minutes or integrate your existing Python models** to further boost performance and your team's efficiency.

Auto Insurance professionals have access to **visual sunbursts** that allow them to understand which claim is fraudulent and why as well as **take specific actions** that will be logged in the system. TAZI Claim Fraud Detection **customizable ML Dashboards** allow each user to keep track of their key indicators.

Moreover, you can implement your industry knowledge into machine learning through our **Human in the Loop** functionality. Experts can **explore and correct the fraud model**. Claims managers spend less time on clean claims and can concentrate more on the suspects.

At a time when we are surrounded by uncertainty, let TAZI Claim Fraud Detection Solution™ help you prevent loss of wealth.
