Continuous Delivery Lifecycle Management for Modern Applications

tcs MasterCraft™
DevPlus

TCS MasterCraft DevPlus is an integrated, enterprise wide continuous delivery lifecycle management platform that helps you plan, execute, automate, and govern demand to deploy processes. Cross-functional teams, including lines-of-business owners, business analysts, developers, QA personnel and operations teams can now perform day to day activities with complete traceability, collaboration, and governance, thus achieving true DevOps.

Align Your Business Strategy To Execution

Portfolio managers and senior executives can –

- Plan initiatives, break them into features, and include them into a product release downstream
- Roll up and consolidate execution status at the portfolio level, to drive governance and end to end tracking

Define, Build and Test Faster

Agile and Scrum teams can –

- Plan product backlogs, manage product increments and sprints, track tasks, and oversee daily progress
- Leverage agile test management and automation to enhance end product quality

Enable Continuous Deployment

Agile teams can –

- Extend continuous integration, support automated deployment into various test environments, and trigger automated tests to validate changes
- Improve time to market and ensure continuous delivery of value to business and end customers
