Power Platform Architectural Guidelines

TEAM CANDI works closely with your organization in order to build this required "Power Platform Architectural Guidelines" document.

The outcome of this assessment is document with the following sections:

1) Application Architecture Guidance
2) Application UI/UX guidance
3) Application Lifecycle Management guidelines

Are you planning to transform your organization with Power Platform?

You need for guidance and best practices for planning and delivering Power Apps projects?

Our Assessment will determine your goals.

Application Architecture

Application architecture section aims at providing guidelines on how to create a Power Platform application that can be integrated correctly with available data.

User interface and experience design

user interface design section is not a about graphical design but aims to provide development teams with a collection of approved user interface architecture blueprints.

Application Lifecycle Management

Application Lifecycle Management (ALM) includes best practices on how to correctly develop, manage and operate applications on the Power Platform.
