

## PRODUCT SHEET

# Migration, consolidation, optimization

Migrate your content between archives or between other systems.

### Customer Need:

Companies with archives often struggle with several questions regarding new technologies, online products, requirements of their users. One of the biggest problems is a need to change the existing, but old and obsolete, solution with a new one from a different vendor, whether this is an email archive system, ECM/DMS system, or messaging system.

It's a common case that the company has an email archive software running around the clock because of compliance, litigation, and technical reasons. Email archive solutions are usually replacing the original emails in the users' mailboxes with so-called "stubs", or sometimes, they remove the emails from the Exchange server. Migrating only the mailbox content to a new system or to Office 365 would cause data loss; you would get a bunch of non-functional shortcuts. All mail previously moved to the archive would be inaccessible. How to solve this problem?

**FULL CONTROL**

**FREEDOM OF CHOICE**

**MINIMIZE DOWNTIME**

**DIRECT CONNECTION**

**SCALABLE**

### Solution:

**contentGATE** is a product that allows the migration of your content from one system to another. Its focus is legacy email archive systems, like Metalogix Archive Manager, IXOS / Opentext, Enterprise Vault, Zantaz, Mimosa and EMC, and email servers, like Microsoft Exchange, IBM Domino. contentGATE combines user-friendliness and easy handling with rich functionality, helping you to handle complex migration scenarios. You gain full control of the migration process and can set up what to migrate, how and when. contentGATE can retrieve the shortcuts of the legacy archive or transform them to shortcuts of the new one. There is no downtime and break of service for the end users; you can prepare the target system in the background and switch over once the migration is finished. The migration process is schedulable and fast, compliant with the legal and with your company's regulations. Every operation is logged; you can tell whether every single item has been migrated correctly.

We know how to handle legacy archives, we address the possible issues, and we have a plan for you to have a successful migration to a new system. contentGATE makes this complex task of moving your data to a simple and straight forward process.

## PRODUCT SHEET

# Migration, consolidation, optimization

Migrate your content between archives or between other systems.

### The Technology:

Simply to say **contentGATE** migrates emails/data from server A to server B. During this process, contentGATE consolidates emails/data according to the customer's requirements (possible filtration, selection, active/passive email reference consolidation) and optimizes emails/data according to the set-up migration process. Just because you move to the cloud or to a new archiving solution, it doesn't mean you have to leave your existing email behind. There is a way to make the move to the cloud complete. contentGATE is a migration product specially developed to solve migration scenarios. It manages data transfer between over 25 systems!

#### The SUPPORTED SOURCE systems are:

**EMAIL ARCHIVES:** Symantec Enterprise Vault, Opentext / IXOS, EMC Email Xtender, Autonomy / Zantaz EAS, Metalogix Archive Manager, Mimosa Nearpoint, Saperion ELM, d.velop d3, Easy XBase, HP IAP, IBM ICC, iQ.Suite Store, Quest Archive Manager

**EMAIL SERVERS:** MS Exchange, Office 365

**OTHER (DMS, ECM, etc.):** Lotus Domino, Groupwise, Saperion ECM (Lexmark), Datengut

#### The SUPPORTED TARGET systems are:

**EMAIL ARCHIVES:** contentACCESS E-Mail Archive, contentACCESS File Archive, Metalogix Archive Manager Exchange Edition, Saperion ELM, Enterprise Vault, d.velop d.3

**EMAIL SERVERS:** MS Exchange 2010 and newer, MS Exchange Archive Mailbox, Office 365, MSG, EML,PST

**OTHER (DMS, ECM, etc.):** MS SharePoint 2013, Optimal Systems enaio, Saperion ECM (Lexmark)

#### Key features:

- Direct connection to source and target archive.
- 100% migration, including archived data and client shortcuts.
- Scalability – advanced configuration and resource allocation.
- Full control of the migration.
- Mapping of users and retention categories.
- Freedom of choice whether to migrate all data or only a subset.
- Minimalize downtime during migration – prepare the target in background and switch over.
- Incremental migration – both email archives can co-exist.

### Business Benefit:

With **contentGATE**, you can easily migrate, consolidate, and optimize your old system into a new one. You have full control of the migration and can set-up what to migrate and how. The supported sources and targets are available for the main business cases; other connectors are available upon customer request.

#### Benefits include:

- Easy full migration of obsolete archive data and shortcuts to a new platform.
- Tailored migration with full control of the process.
- Plan and scale the resources.
- Smooth and fast migration in the background without a downtime for the end-user and without a break of the service.
- Migration to the newest technology – Office365.
- Compliant migration.
