Microsoft 365 & Azure Assessment

As organizations adopt hybrid work models and undergo digital transformations, the risk of online security threats has surged.

These threats pose significant challenges to businesses, as they are constantly targeted by malicious actors.

If you find yourself confused by acronyms such as SIEM (Security Information and Event Management) or XDR (Extended Detection and Response), don't worry, Avvale is here to provide clarity and steer you toward effective cloud security practices.

In a world where the volume of data and alerts continues to grow, IT budgets are shrinking, and there's a need to protect vulnerable legacy systems, Avvale empowers you to reach your broader security goals. It enables you to identify current and real threats using Microsoft 365 tools and Azure security capabilities.

During the assessment process, Avvale collaborates with you to strengthen your overall cybersecurity strategy. It accomplishes this by:

- Analyzing cyberattack threats specific to your organization.
- Offering practical recommendations to mitigate these threats.
- Evaluating your IT and security priorities.
- Providing insights into Microsoft's holistic security approach.
- Demonstrating how integrated security solutions can be implemented.
- Enhancing your understanding of the benefits and capabilities of Microsoft tools and Azure security services.

We also assist in selecting the most suitable Microsoft tool to defend against threats based on your specific needs.
