

Fix Misconfigurations. Fortify Your Microsoft 365

# M365 Best Practices Remediation TechNet UC

## Engagement Results

-  Fully remediated M365 environment, aligned with Microsoft best practices
-  Enhanced protection against threats and unauthorized access across email, Teams, and SharePoint
-  Reduced risk of data leakage, account compromise, and compliance violations
-  Improved compliance with regulatory and organizational standards

“In today’s digital-first workplace, collaboration and productivity tools are the backbone of business operations. Effective configuration and governance of Microsoft 365 services are essential for security, compliance, and operational excellence.”

Is your organization’s Microsoft 365 environment truly protected against evolving threats, or could misconfigurations in Exchange, Teams, SharePoint, or OneDrive be silently exposing your business to risk?

## The Foundation of Secure Collaboration & Productivity

Microsoft 365 is the cornerstone of modern collaboration and productivity. Misconfigurations and outdated policies can lead to vulnerabilities, compliance issues, and operational inefficiencies. TechNet UC’s M365 remediation ensures your environment aligns with Microsoft’s Zero Trust principles, security frameworks, and operational best practices.

By proactively remediating your environment, you’ll strengthen your organization’s resilience and ensure users remain secure, compliant, and productive.

## Why Remediate Your M365 Environment

A misconfigured Microsoft 365 environment can quietly expose your organization to security threats, compliance gaps, and operational inefficiencies. Remediation ensures your collaboration and productivity infrastructure is aligned with Microsoft’s best practices—strengthening protection, simplifying management, and supporting regulatory readiness.

**Review** your current Microsoft 365 configuration and security posture

**Recalibrate** Exchange Online, SharePoint Online, Teams, and OneDrive policies

**Implement** Conditional Access, Defender for Office 365, DLP, and information protection

**Configure** role-based access controls and audit logging to keep your environment secure

## What to expect

TechNet UC's certified experts will assess your Microsoft 365 configuration, security posture, and compliance settings. We'll remediate policies across Exchange, SharePoint, Teams, and OneDrive, implement recommended security and compliance controls, and integrate with Defender for Office 365 and Entra ID.

We'll work with you to:

- Review your current M365 configuration to identify gaps and risks
- Remediate policies and settings for email security, collaboration, and data protection
- Configure data loss prevention, information protection, and retention policies to safeguard sensitive data
- Deliver documentation of changes, operational guidance, and a knowledge transfer session

## Remediation enables secure, compliant, and resilient Microsoft 365

## Who should be interested

The engagement is intended for security decision-makers such as:

- Chief Information Security Officer (CISO)
- Chief Information Officer (CIO)
- Chief Security Officer (CSO)
- Endpoint & Device Management owners/decision makers
- Application business owners
- IT Security
- IT Operations
- Security Architect
- Security Engineers

## Why TechNet UC?

When it comes to unified endpoint management you need an experienced partner.
