

What is Cloud Assessment?

What is Cloud Assessment?

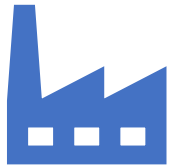

- A cloud readiness assessment is a process where an organization looks at its resources and IT environment and determines if it is capable of migrating to the cloud. An organization that has ensured it is ready to migrate and has formulated a plan on how to do so can reduce the time and money it takes to migrate.

What is Cloud Assessment?

- Cloud assessment can also be done to make sure optimum usage of the current resources and to ensure that best practices are followed.
- Ask yourself these questions:
 - Which is a better option for our IT environment - hosted private cloud or public cloud deployments? How does our short to medium term IT strategy support overall business objectives?
 - Do we have skillset gap after a cloud migration? What changes do we need to make in IT staffing?
 - How to control 'shadow IT', or 'zombie apps' or workloads that are consuming more resources than the value they are delivering?

- Ensuring that you reap the most out of cloud technology will require more than just simply moving your databases and applications to the cloud.
- Moving all your infrastructure to cloud is not the best option always. In some cases, the best option is to assess and find out which workloads should or should not be on cloud. Without a comprehensive plan in place to direct this move, you may end up wasting time and resources.
- In order to get the most out of this technology, cloud environment needs to be setup in a manner where you ensure optimum use of resources and take care that industry best practices are followed.
- At Synergetics, our teams build greenfield solutions for organizations to enable intelligent actions & accelerated business outcomes. We would like to take the opportunity to speak with you or your team regarding how we can help you with the optimization of investments in the information technology arena.

Synergetics provides Cloud Readiness Assessment which helps you to -

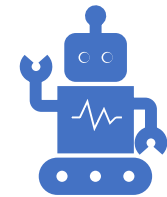

Understand the current state of your infrastructure.

Analyse which parts of your infrastructure best suited for your Cloud Journey.

Define the steps/plan required for a successful migration to cloud.

Assessing your workloads for ensuring Security, Reliability, Scalability and Cost Optimization.

Schedule a free one on one assessment session with our experts to explore the possibilities of your Cloud Journey for your organization
