Digital Workplace

Transform business, enable employees to work efficiently, collaboratively and securely with managed support by O2.

What is Digital Workplace?

Digital workplace is the alignment of technology, employees and business processes to improve operational efficiency and meet organisational goals. This is achieved through Digital Transformation.

Successful digital transformation begins by creating a culture of employee trust and empowerment that puts the right information and tools in their hands, wherever they are.

- Device Management
- Connectivity & Data Management
- Managed Logistics
- Managed Service & Mobility
- Apps (Corporate & Personal)
- Device Selection
- Security & GDPR

What is involved?

O2's approach to a digital workplace is achieved through discovery, design, delivery and manage.

Discovery - We have a structured workshop and package approach in order to understand your business.

- Security
- Productivity
- Mobility
- Collaboration
- Licensing
- Service Readiness

Design – End to end solution designed by our industry qualified experts.

Deliver – Build and test customer environments, device deployment solutions including connectivity, security, applications and managed logistics.

Manage – In-life management through O2's managed service capabilities including platform, security, policy and device management.

What are the benefits?

- Tailored digital workplace strategy
- Clear pathway and steps for transformation
- Improved productivity through enhanced employee experience
- Plan to deliver continuous improvement to your security posture
- Greater return on investment through higher user adoption
- Managed services allowing you to focus on core business.
