The reinvented business models and productivity for scale

Nowadays, businesses are pushed to reinvent their model, to be innovative and productive in order to stay competitive and be able to scale. Disruption happens fast and agility is needed to adapt. A lot of investments are being made, are they satisfactory?
CHALLENGES

You make huge investments on a yearly basis. However, the results of those investments are often unsatisfactory, or the expected results were bigger than the realized ones.

IDEAL SOLUTION

You like your spending on innovation to lead to fast ability to response to market changes, readiness to scale, 24x7 online services and better product launches.

DESIRED OUTCOMES

You desire to have a good control on your spending's, while driving the innovation forward and at the same time be compliant with all regulations.

Azure DevOps Services

The cutting-edge technology services that make the bridge between your R&D and IT Operations to bring latest and greatest to developers, while complying with the IT and Security Compliance requirements.

Cutting-edge technologies

Developers need to have access to the newest libraries and frameworks at their hands, without requesting them and waiting for a dev environment deployment.

Automation of Dev Cycle

Deployment cycle needs to be fast, QA performant and all of this should be automated, in order to have a faster and more productive development team.

Deployment and Release compliance

All releases need to be compliant with IT strategy and Security controls, be monitored 24x7 and with full ability to scale.

DevOps Services and Microsoft Azure

Thanks to Microsoft Azure, we can utilize the Public Cloud's full potential and bring the value of our Services towards our clients.

Automated Dev Pipeline

We utilize Azure Pipelines, Repos, Test Plans, Artifacts and Container Services to create a CI/CD that just works.
Automated Release Cycle

We utilize Azure DevOps tools to automate the release cycle and implement quality check controls in the process.

Monitoring and response

We utilize Log Analytics to create transparent environments, which are easy to manage and predictable in their behavior.

Develiot's product launch

Develiot is a startup. As such they were pressed by tight deadlines to release their platform's version 1. We created an automated containerized environment to host their solution in Azure and saved enormous time and investment money. Their solution was 1 of the 4 finalists in Microsoft Partner of the year awards for FY 19 in category – IoT , among Accenture and others.

Fast Deployment

Automated development cycle helped with fast releases, reaching go-live stage, faster than ever before.

Controlled spending

With the scalability in place, their company can pay only for their usage, according to their needs.

Satisfaction

"Telelink Business Services's DevOps solutions, helped the backbone of our Platform by providing a great scalability and availability when we need it, while significantly reducing the release cycle for each deployment we have. Thank you!"
Microslav Gechev, CEO, Develiot
