

Tendfor Contact Center and Attendant Console for Microsoft Teams

Meet the Tendfor integration for Microsoft Teams

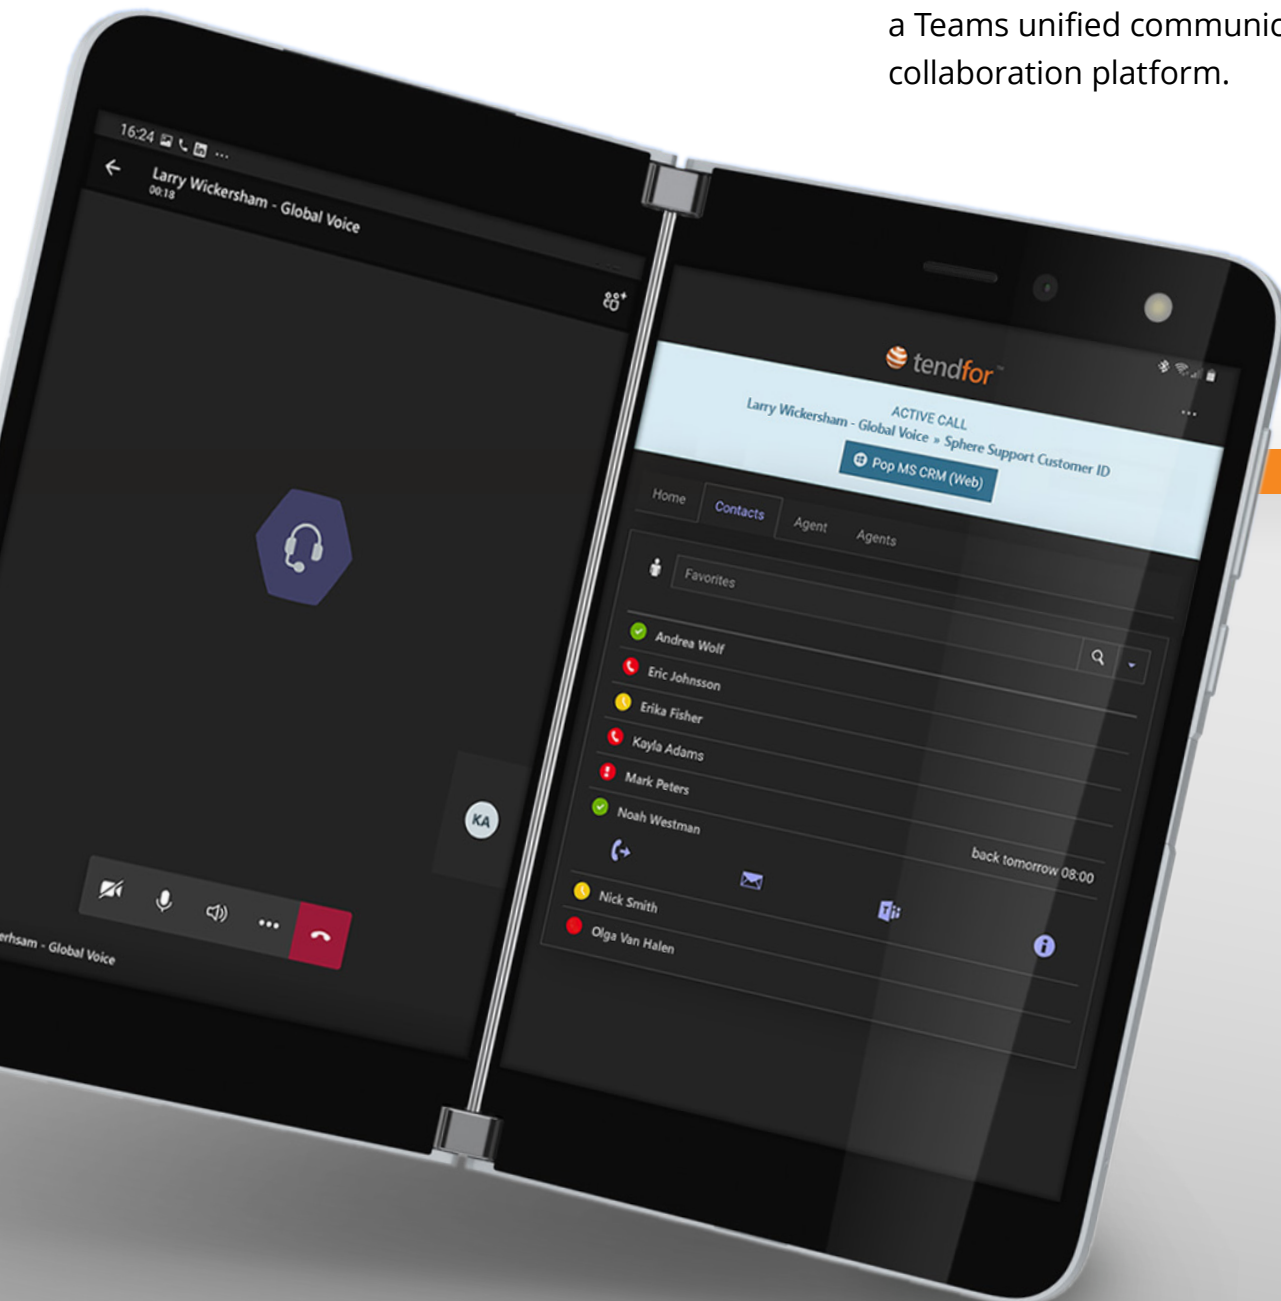

Streamline your contact center telecommunications on one platform with Tendfor, the world's first contact center and attendant console built exclusively to integrate with Microsoft Teams. Works with Microsoft Teams Calling Plans, Operator Connect, & Direct Routing.

What is Tendfor?

Tendfor contact center and attendant console for Microsoft Teams is the world's first solution to be fully certified for Microsoft Teams based purely on native API integration, including for all call handling.

Tendfor assists some of the world's largest and most demanding enterprises and agencies, delivering an innovative, user-friendly experience, greater ease of maintenance, and no-compromise professional-grade functionality.

Capable of fully integrating with all external communication systems, Tendfor allows enterprises and agencies to cut costs with ease, offering lower TCO for those looking to get the most out of a Teams unified communications and collaboration platform.

How it works?

As the first platform in the world to integrate natively with customer's Microsoft Teams tenant—relying exclusively on Microsoft's APIs for Teams—Tendfor requires no service provider or SBC integration to function as it can also operate with Microsoft Teams Calling Plans and Operator Connect.

Using Tendfor, PBX replacement functionality and call handling is completely Teams-centric. This means easier onboarding and greater flexibility for users working from home or in a hybrid scenario.

The app also allows greater control of advanced call handling from the Teams application, granting more accessibility and freedom wherever users choose to work.

With the Tendfor app, users can set absence referrals with ease, perform advanced searches in the organization's directory, and monitor presence. This increased level of precision empowers agents to find the right contact for the job whenever needed, leading to faster issue resolution and improved customer relationships.

From quicker search functionality of relevant call histories to greater log-in segmentation, Tendfor combines innovative mobile tools with wider surface access to give users the ability to service customers whether in or out of the office.

Tendfor and Microsoft Teams integration benefits

Many enterprises are still saddled with legacy switchboard and contact center functionality.

Tendfor is a tool designed to lower TCO, offer smarter functionality for attendants, contact center agents, and office users, while providing a host of added benefits for greater efficiency and productivity with seamless Teams integration.

Agent Benefits

A powerful set of tools, all in one place

From professional hotkey control and reliability to productivity-enhancing wallboards, Tendfor provides a host of data, support, and utility for agents of any experience level within the Teams application.

Office User Benefits

Seamless accessibility for productivity on the go

With Outlook, Teams, and mobile apps, a user-friendly UI, and advanced search functionality, team members can manage their workload from anywhere without ever skipping a beat.

IT Benefits

Streamlined administrative tools for fewer daily headaches

Designed with IT professionals in mind, Tendfor combines modern Microsoft cloud HA architecture in Azure with a unified platform for easier maintenance and efficiency.

“During the COVID pandemic, a quick migration to Teams and Tendfor allowed us to maintain full customer service during the lockdowns.”

– Julien Saligot,
Head IT Operations, Toyota
Financial Services France
