

# Advanced online tests and exams

**INSIGHTFUL AND RELIABLE. NO MATTER THE CIRCUMSTANCES.**

## Integrated examination ecosystem

Testportal is an online platform that allows you to conduct proctored **exams** or **tests**. Scalable Azure cloud infrastructure guarantees a smooth examination process. Seamless integration with Microsoft Teams provides outstanding examination experience and enterprise-grade identity verification by Azure AD.

## Create, share and analyze test results all in one place!

The Testportal app for Microsoft Teams **offers much more than the built-in Microsoft Forms** app. With Testportal, you can ensure your test is secure, configure test specific **time limits** and view **detailed analysis** and statistics about the finished test. The *Honest Respondent Technology* will **mark each test leave**. If you would like to ensure greater oversight, you can also analyse the video image from the students' **device cameras**.

### Digital transformation of exams

- ✓ **Automatic grading**
- ✓ **Non-intrusive proctoring** and live monitoring
- ✓ Restrictive **time limits**
- ✓ Question **drawing algorithms**
- ✓ **Advanced question content creation** and categorization
- ✓ **Detailed results**, reports and statistics
- ✓ **Certificates**
- ✓ **Data security** and GDPR compliance

## Immediate go-live

You don't need to set up accounts for your students. Your license administrator assigns permissions to test configurators only, and the Microsoft 365 integration allows you to start creating tests right away. That's why implementing Testportal **in the cloud or on your own servers** is effortless.

## Trusted by lecturers

*I recommend using Testportal platform to conduct tests and quizzes during lectures and final exams for particular subjects.*

*Based on interviews with users, I am of the opinion that the advantage of the Testportal platform is the possibility of configuring tests according to specific needs, as well as the wide possibility of analyzing the results. I hope that in the future we will be able to standardize at least some exams based on the analysis provided by Testportal. Of course, the use of technology that hinders the unfair approach to testing is also important. [...]*
