SEYMOUR

THE BRIDGE

AUTOMATED EXCEL TO WEB DATA WITH NO CODING REQUIRED.

Process, combine and sanitise your data feeds from multiple Excel-compatible sources and export as embeddable charts and tables or direct to JSON or CSV format for use in your own applications.

Fully customisable and embeddable tables and charts on your own website or intranet.

Affordable monthly plans with no lock-in contracts.

FLEXIBLE AND HIGHLY CUSTOMISABLE

Seymour is able to work with any type of data from share or unit prices, sales records, inventory, performance. You name it and Seymour can handle it.

Create your own data objects and field types, define an import method and sit back and watch your Excel or CSV data automatically publish to your website or app with minimal user interaction.

Files can be imported manually via web upload or on an hourly, daily, monthly basis (whatever you need) automatically upon receipt.

FROM THE CLOUD TO YOUR BROWSER

Seymour is software-as-a-service running in our secure Azure cloud. No software needs to be installed, just create a subscription and get started, all from your web browser.

Manage all your data and account settings online with no coding required. Your charts and tables are hosted within Seymour and easily embeddable on your own website with a simple line of code that can be given to your existing website provider.

No costly licenses, just a monthly fee tailored to your business requirements.

1

RESPONSIVE
CHARTS AND TABLES

Seymour is also capable of producing great-looking charts and tables within the app, ready to publish directly on your own website - fully responsive for mobile and other devices.

The charts are customisable, and interactive so visitors to your website can view data in multiple ways to suit their needs.

Charts and tables will update automatically in real-time, so whenever your data changes it will be re-imported by Seymour, and the website page can be refreshed to show the latest information.

CUSTOM Visualisation

Publish your data directly on your existing website as embeddable tables and charts customisable to fit your look-and-feel.

DATA AUTOMATION

Excel or CSV files can be automatically processed from email or FTP taking the pain out of data entry and processing.

INTEGRITY CHECKS

Key constraints, type validation, overwrite protection and (coming soon!) automated sanity checks.
