

Most AI assists. Opus operates.

Opus is the only platform that rewires your processes for AI, runs them, and tells you what that's worth. It starts with **Discover**: alongside your teams, mapping how the work really runs and which processes to rewire. From there, Opus creates a **Digital Twin** - a living model of your enterprise today and where it's headed - that estimates ROI up front and measures it as the work runs.

For the first time, you can connect AI transformation to the value it creates.

Why enterprises like yours choose Opus

Built for the people who know the work

Co-built with the non-technical staff who do the job, so Opus captures how the work really happens - including the steps that live in their heads - then automates the whole process end to end.

Rewires, not just runs

Most tools automate the process as it is today. Opus redesigns it with AI, then runs it - built on a proprietary Large Work Model of 1.4M regulated processes.

Works with your stack

Works with any AI model and 3,500 integrations, fitting the systems and tools you already use instead of replacing them.

Operates continuously

Runs as a layer on top of your systems - always on, always visible and improving as things change, so you can watch your whole organization run live.

"Enterprises today don't need more automation tools - they need outcomes. When you rebuild the workflow rather than bolt AI on top of it, the gains aren't incremental - they're transformational."

Ritesh Idnani · CEO & Managing Director, Firstsource

Experience the value first

Start with a tailored bootcamp on a real workflow. You set the success targets and pay nothing unless it hits them.
