

## AI-Powered Code Intelligence and Insights

### Know Your Code™

The Code Registry was founded through a necessity and a belief that there is a huge knowledge gap within the software development world between development teams and senior leadership.

The Code Registry solves this problem through a **zero-friction, rapid time-to-value** approach to static code analysis. Our platform leverages the latest **AI technology** to generate a full suite of **automated intelligence** and **insights** across an organization's entire suite of software (code) all designed around the needs of business leadership (think Founder, CEO, CTO, CIO, Investor).

Whether an organization has 5 repositories or 5,000, our platform works in the same way and will return detailed insights and reporting covering;

- Full Security Vulnerability Assessments
- 3rd Party Dependency and Open Source licence detection
- Code Complexity analysis
- Code Quality and Improvement identification
- Language and File Type Summaries
- Cost-to-replicate valuation
- Developer output and productivity benchmarking
- Executive team ready reporting
- All supported by AI-powered insights, recommendations and our autonomous AI agent Code IQ™

We believe that every senior leadership team should have complete visibility over their business's most valuable assets - their software (code), and be empowered with the right information to make critical decisions about your ongoing development activities.
