

Modern Endpoint Management

Manage any device, at any time, from anywhere

Achieve a secure and manageable endpoint estate, by leveraging the power of the cloud, and (optional) integration with existing enterprise grade controls from Microsoft Endpoint Configuration Manager (MECM).

Why customers choose our Modern Endpoint Management solution

- We offer a holistic approach
- 1st and 3rd party integration possibilities
- Our technology experts have years of experience working with clients in all sizes and different industries.
- Benefit from our *collective* combined endpoint management-, security-, communications- and productivity expertise.

Improved User Experience

- Access corporate data from any location (from the office, on the road or at home)
- Support for different device types (corporate/personal phone, tablet, pc or mac)
- Enable users to be more independent (e.g. Autopilot, Self-Service Password Reset)
- Simplified- and consistent resource access (single sign-on, Windows Hello for Business)

Better security posture

- "The Collective" Security Baseline (Microsoft + CIS + Best Practice)
- Conditional access, based on true *dynamic* compliance state and risk scores.
- Mobile Device Management (MDM) and Mobile Application Management (MAM)
- Windows Virtual Desktop support.
- Optional managed services, including SOC

Cost efficiency

- Autopilot minimizes traditional image management overhead
- Self Service Password Reset reduces the amount of helpdesk calls
- (Optional) integration with Configuration Manager, makes efficient use of investments done already.

A secure, cloud-based device management solution, and a consistent user-experience, across different device types.

Support for different device types

- Windows 10 and macOS
- iOS / Android
- Windows Virtual Desktop (WVD)
- Mobile Device Management and/or Mobile Application Management

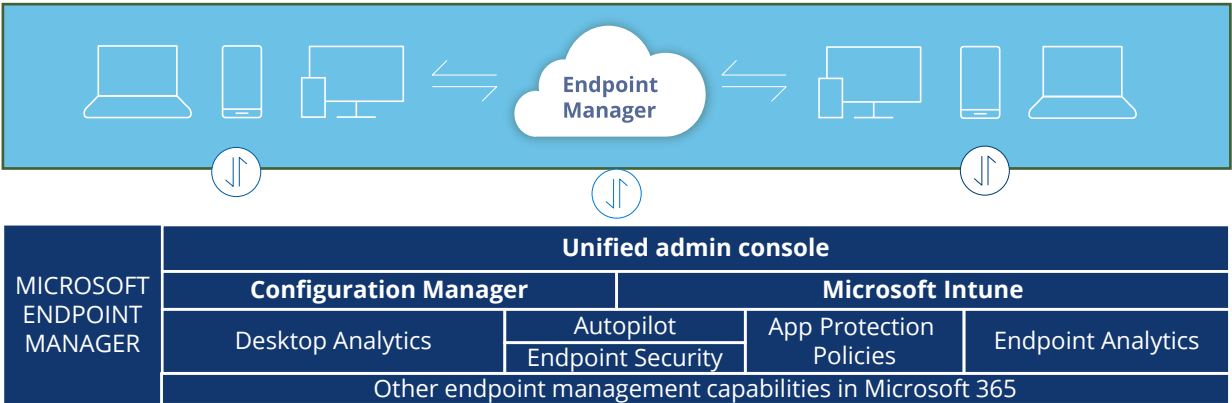

Modern Endpoint Management

Our promise to you

In a world where remote working is *the new normal*, we guide you towards a user empowered endpoint estate, managed from the cloud, with a strong focus on both security as well as productivity.

Configuration control

- 2 flavors:
 - Cloud native: Microsoft Endpoint Manager (Intune)
 - Best-of-both worlds: Microsoft Endpoint Manager (Intune + Configuration Manager, leveraging CMG connectivity)
- Endpoint security (incl. Bitlocker Management, Attack Surface Reduction, ...)
- Zero touch provisioning (incl. Autopilot, Apple Business Manager, Android Zero Touch, Samsung Knox Mobile Enrollment)
- Insights (Endpoint Analytics and pro-active remediations)
- Desktop analytics (MECM integration) to provide valuable insights during periodic Windows 10 feature upgrades

Compliance

- Provide access to corporate resources, using smart and dynamic compliance criteria (risk scores).
- 3rd party application patch management integration possibilities (e.g. Patch-My-PC)

Benefits

Our Modern Endpoint Management solutions allows for IT to focus on what really matters, making sure that corporate data remains protected, while supporting the business to work secure and more flexible then ever.

Why The Collective?

- We go the extra mile, and truly care about our customers and their successes.
- We're in this for the long run, aim for a lasting relationship that is based on mutual trust.
- We prefer an open and direct way of communication.
- Benefit from additional insights, gained through our Cloud Security Operations Center (Cloud SOC).

“...In some ways, you can create something more efficient and better than what was there before.”

- Bill Gates, “This is Working”, April 11,2020 [link](#)
