

Modern

At The Modern Data Company, we simplify today's complex and decentralized data ecosystems with an outcome-first approach to data management. Our goal is to make data accessible and comprehensible for everyone, enabling reliable and informed decisions organization-wide.

We built DataOS, the world's first data operating system. DataOS delivers a productized, unified data platform that humanizes data and its access, breaks data silos, and quickly accelerates companies on their path to data democratization — without disrupting their existing data infrastructure.

DataOS®: The Fastest Path From Data to Decisions

DataOS is a paradigm-changing data operating system that delivers next-gen data and analytics infrastructure as a product. It weaves a connective tissue across distributed data, and simplifies operationalization by providing users with access to quality, governed, secure data in real time — DataOS empowers teams with the information they need to make better decisions.

Customer Benefit

Focus on value creation from data instead of integration and process work.

Lower OpEx by reducing dependency on point solutions and technical resources.

Build data products quickly with a superior data experience.

Achieve true data democratization with low-code access to business concepts which abstracts away underlying data complexity.

DataOS®: A Paradigm Shift

No need to modernize legacy systems

DataOS future-proofs your legacy data infrastructure.

Outcome-based data engineering

Let business define and drive outcomes by automating pipeline generation.

Intelligent data movement

Use and find value in data before moving it.

Modern architecture

Build on an open and composable architecture that delivers results in weeks.

A Complete and Composable Modern Data Stack, Out of the Box

Data sharing

Enable seamless, secure, and monitored data collaboration across your business ecosystem without making copies of data

Minimal data movement

Connect to any data source in minutes and start using the data without moving it

Business ontologies

Allow business users to view data through a business lens that abstracts the schema and formats of underlying data

Data-as-a-product

Convert data into consumable data products with dictionary, schema evolution, lineage, impact, profiling, usage, and quality

Modern governance

Centralized, attribute-based governance covering the entire data lifecycle

Metadata-driven data management

Observability, discoverability, governance, and metadata management across all your data sources
