

# Microsoft Fabric Discovery Workshop

Since its launch in May 2023, Microsoft Fabric has revolutionised the data and analytics landscape, offering a single integrated environment for businesses to collaborate on their data projects. This all-in-one analytics platform empowers enterprise organisations to ingest, store, and analyse their data seamlessly. With real-time analytics, data science capabilities, built-in governance, security, and AI functionalities like Copilot and custom AI models, Microsoft Fabric is a game-changer.

But let's face it—understanding exactly what Fabric is, its main components, how it fits with your existing infrastructure, and what investment is needed can be overwhelming. That's where Oakland's Microsoft Fabric Discovery Workshop comes in.

## Gain Clarity

Understand and learn the key capabilities of Microsoft Fabric

## Identify Needs

Find the best use cases for Microsoft Fabric in your organisation

## Understand Oakland

In the workshop, you will work with our team, develop an understanding of how we think, and get a sense of our culture

# Why Attend Our Workshop?

As Microsoft Data and AI partners, we bring decades of expertise to the table. We've built highly successful data platforms of all shapes and sizes, working across a range of industries and use cases. Our pragmatic approach ensures that we help organisations select, implement, and embed new technology into their culture effectively. With 40 years of experience in operational excellence, we know how to make change stick.

Our Microsoft Fabric Certified Engineers have extensive experience in building data platforms in Azure. They'll guide you through the technology behind Microsoft Fabric and show you how it can transform your organisation.

In our FREE half day workshop we'll cover:

## Deep Dive into Microsoft Fabric

Understand the core components of Microsoft Fabric and how they integrate to provide a unified data platform.

Explore the real-time analytics and data science capabilities that can drive your organisation forward.

## Integration with Your Infrastructure

Learn how Microsoft Fabric fits within your existing IT infrastructure.

Discover the steps to seamless integration, ensuring minimal disruption and maximum benefit.

## Governance and Security

Get insights into the built-in governance and security features of Microsoft Fabric.

Understand how these features ensure compliance and protect your data.

## AI and Advanced Analytics

Explore the AI capabilities of Microsoft Fabric, including Copilot and custom AI models.

See how AI can enhance your data analytics and decision-making processes.

## Investment and ROI

Discuss the investment needed for implementing Microsoft Fabric.

Evaluate the potential return on investment and long-term benefits for your organisation.

Following the workshop, we will collate the information received from the stakeholders involved and provide a complementary write-up. This report will provide you with clarity of where you sit today, call out key insights on your capabilities and deep dive area, and provide a path for delivery of change.

As part of providing the report, we host a 1-hour follow-up session with you to discuss any questions you have or to talk about how Oakland may be able to help you on your data and analytics journey.

## Who Should Attend?

This workshop is ideal for:

- CIOs and IT Managers looking to understand the technical and strategic benefits of Microsoft Fabric.
- Data Scientists and Analysts eager to leverage advanced analytics and AI capabilities.
- Business Leaders interested in how a unified data platform can drive business growth and efficiency.
- Project Managers planning to oversee the implementation of new technology.
