# Increase your profit margin accurately accounting for landed costs from the start

Have you ever been shocked by lower margins on imported goods?

Do you find it hard and time consuming to calculate all costs with landing goods to your warehouse?

Would you like to know what landed costs you can expect when placing a purchase order?

**Advanced Landed Cost** | AppSource Extension
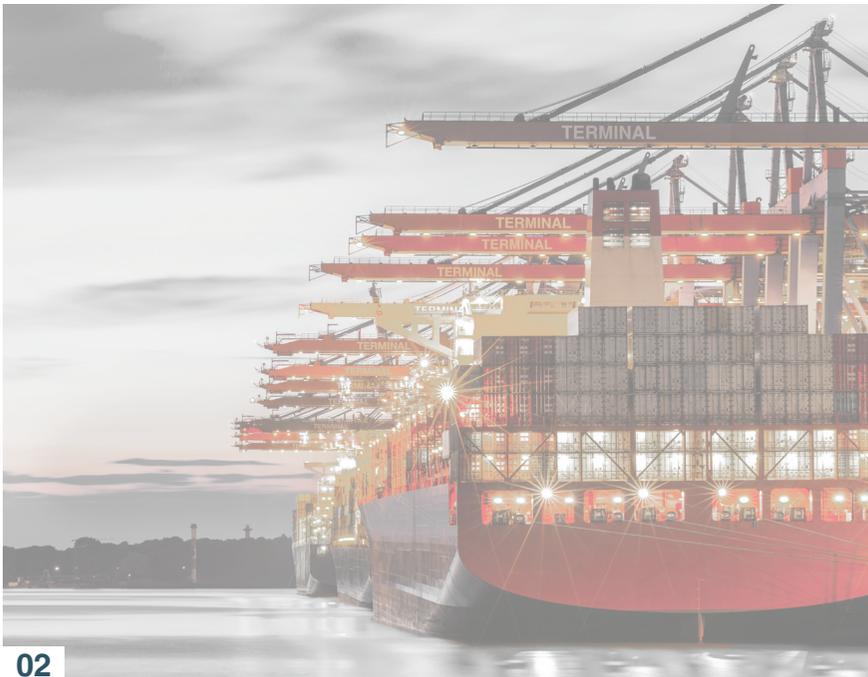

If your organisation is involved in importing, the cost of freight, customs, tariffs, insurance and duty on inventory procured overseas can be significant.

The process to calculate and allocate these costs accurately can be complex and time consuming.

**Landed costs visibility is essential**

# Know your costs from the start.

In today's competitive, fast moving global economy you turn your inventory quickly, often before all after-the-fact procurement costs were applied to your products.

You need full visibility of your expected product costs at the time you place the purchase order.

**Advanced Landed Cost** | AppSource Extension
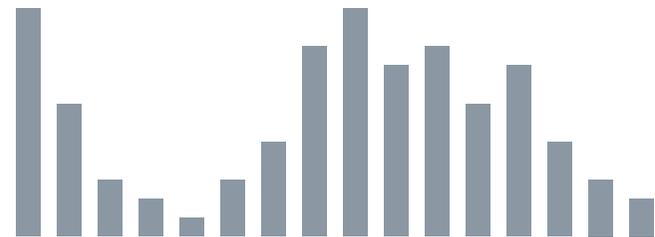

## Estimate Automate Assign

With large procurement volumes managing landed cost often becomes difficult. Assigning receipts to cost lines is time consuming and often result in wrong selection and allocation.

Manually calculating and apportioning cost is complex, time consuming and prone to error.

**Advanced Landed Cost** | AppSource Extension
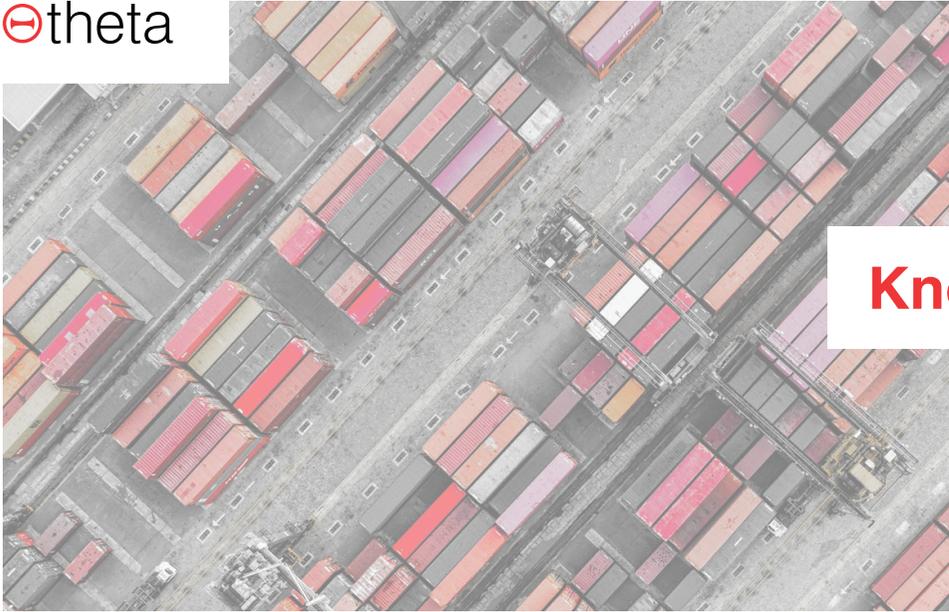

# Know your costs when you order

Automatic **calculation of expected costs** at time of raising a purchase order.

Link one or more purchase orders to a planned delivery.

**Associate purchase lines to shipping containers** so that you know what is arriving.

**Advanced Landed Cost** | AppSource Extension
