Are you wasting time creating invoices and activation keys to setup new customers?

Do you need a turnkey monetisation solution for your app?

Subscription Management is the solution you're looking for. For many ISV partners, publishing a Business Central extension in AppSource incurs an outlay to launch to market.

A successful return on investment requires many elements; marketing, customer support, but also an automated and seamless solution to manage customer subscriptions and billing.

The question is, why reinvent the wheel when one already exists that can offer your customers an easy onboarding experience?

Features and benefits of using Subscription Management:

- Backed by Stripe, #1 payment processing platform, that fully supports all countries where Business Central is available.

- Offer flexible billing models including flat rate, tiered pricing, per seat and usage based.

- Supports 135+ currencies and multiple payment intervals.

- No middleman required. Only direct, secure, end-to-end integration with app owner's Stripe account.

- A seamless user sign-up process that will onboard your customers within seconds.

- Secure customer authentication using single sign-on (SSO) from any environment (SAAS, On-Prem, Dev).

- A simple API that allows you to integrate with a few lines of code.

- A single account for all your apps across any environment.

- Able to operate during network outages.

Supported Editions

Essentials and Premium editions of Microsoft Dynamics 365 Business

Supported Countries

All countries where Microsoft Dynamics 365 Business Central is available.

Supported Languages

Available in English, Dutch, French, and German.
