

Business Central Upgrade Assessment

If you currently use Microsoft Dynamics NAV or Microsoft Dynamics 365 Business Central on-premises, you're probably wondering if Business Central (in the cloud) is the right software to migrate to, and what the costs and benefits are.

We can help with this initial evaluation. Having helped many customers migrate to Business Central, we understand the strengths and opportunities that it gives users and businesses. We've worked with smaller, nimble businesses who need to get underway quickly, as well as large enterprises that need full data mapping and migration services.

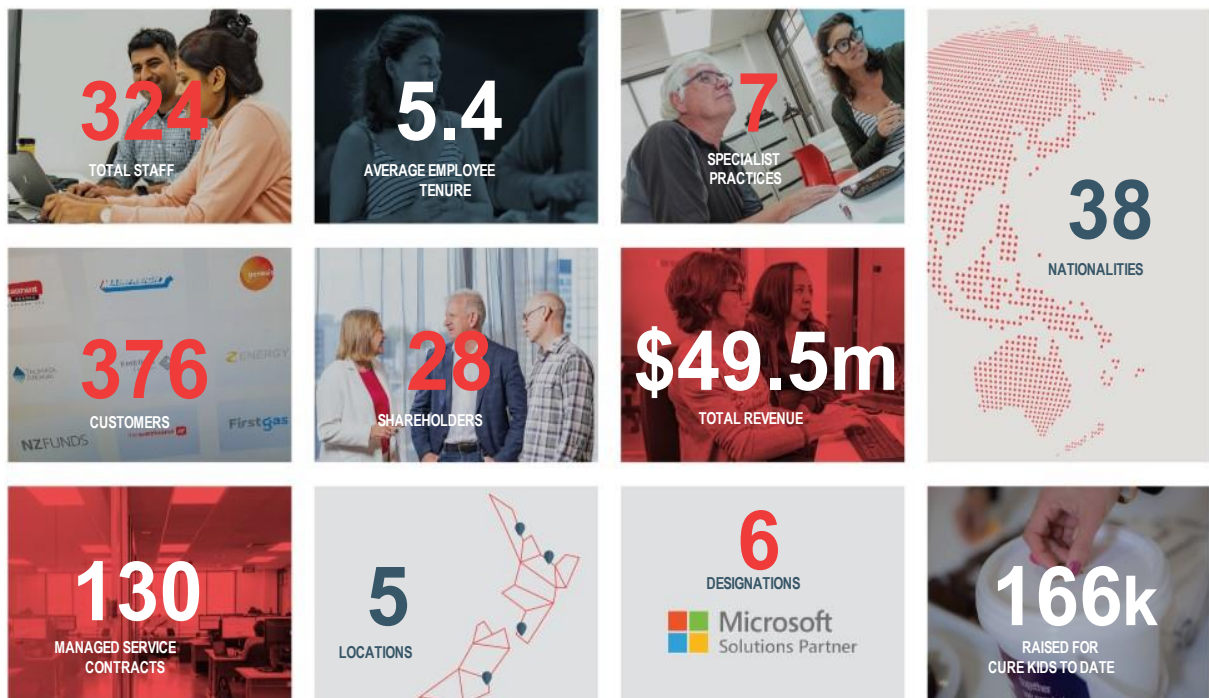

In this complimentary two-hour assessment, our starting point is to listen and learn. We'd like to understand your core business objectives, processes, and functions – and then work with you to plan a transition to Business Central that aligns with these. The output of the session is a custom high-level migration plan that indicates the pathway to Business Central and gives a clear understanding of costs, inputs, and timeframes.

Outputs:

- High-level indicative migration plan, including the needs Business Central must solve
- Review of migration readiness and legacy tool retirement needs
- Estimated migration costs (requires you to provide us with a copy of your database objects)
- Estimated rollout and license costs
- Estimated timeframe and resources required

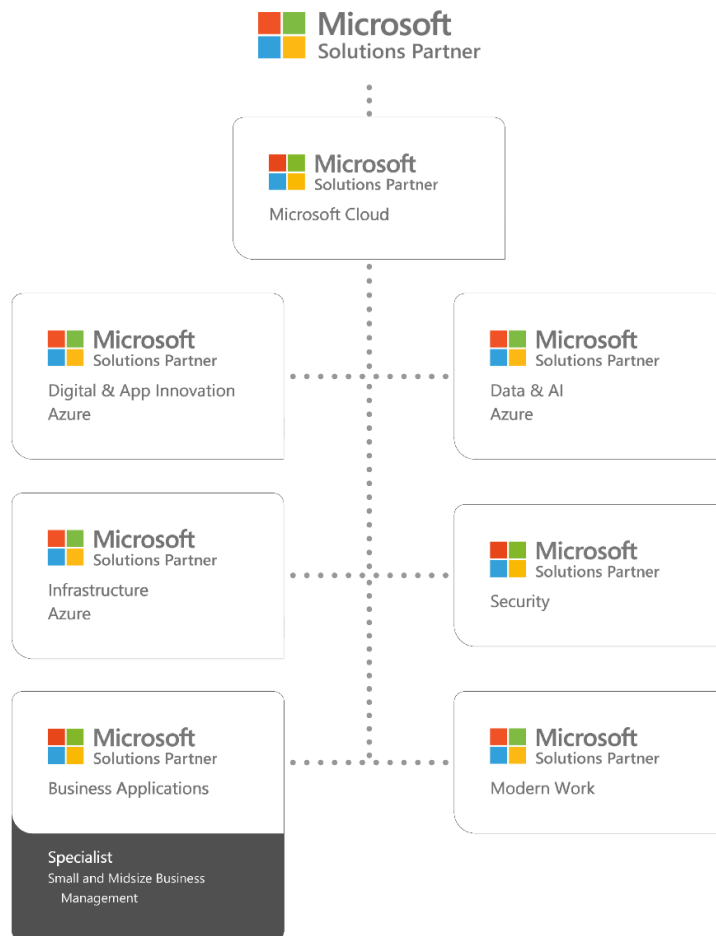

About Theta

Founded in 1995, we are a New Zealand owned and operated technology consultancy with offices in Auckland, Wellington, Christchurch and Tauranga. The contact details for our offices [are here](#).

Our team of more than 330 experienced professionals help organisations like yours to transform their businesses with technology. We are financials, integration, data and insights, digital, cloud, cyber security and collaboration specialists, using globally operated and supported products owned by the largest software company in the world - Microsoft. We work with over 40 global partners, enhancing our capability to deliver industry-specific and cutting-edge solutions for our customers.

We are a Microsoft Solutions Partner and one of the select number of New Zealand-based IT consultancies to achieve the complete set of designations available under the 'Solutions Partner for Microsoft Cloud' title: Digital & App Innovation (Azure), Data & AI (Azure), Infrastructure (Azure), Business Applications (with a specialisation in Small and Midsize Business Management), Modern Work and Security. We're also a certified Cloud Solution Provider.

Theta is also independently certified to ISO 27001, which means we have a strong organisational commitment to the security of our organisation and the projects we deliver for our customers. We maintain an information security management system that covers a wider scope of policies and controls, including risk management, continuous improvement, secure development, physical security, asset management and privacy.
