

Power Platform Governance Audit

Optimise licensing costs, reduce security risk and empower citizen developers

New to Power Platform?

Laying the foundations for good governance is an ideal first step before your team start working with Power Platform.

Already using Power Platform?

Implement a governance plan to keep you on track without disrupting operations. The time is now!

With Microsoft's Power Platform's increasing popularity amongst citizen developers, the rate of apps and flow creation has rapidly increased. But without a proper governance programme, organisations often experience spiralling licensing costs, data security and quality risks and a loss of visibility over environments.

Our Power Platform audit will outline your guidelines, processes and roles, ensuring that solutions created within your environment are high quality, secure, compliant and well-supported.

What it includes

- Two week engagement
- Audit includes Power Apps, Power Automate, Power Virtual Agents, Data Connectors, Dataverse and AI Builder. We also have a dedicated programme for Power BI governance.
- Deliverables:
 - Installation of a Centre of Excellence kit, enabling reporting and analytics for tight management of your apps and flows, as well as data loss prevention policies and governance group setup.
 - A report with architecture and security recommendations for your critical applications.
