

Spectrum UVC

IoT-based UVC control System
V1.1

OVERVIEW

Spectrum UVC is an IoT-based UVC web application that allows enterprises to safely operate and control UVC systems remotely and at scale. The application has all the necessary features to simplify UVC operations at scale, including a mobile app that can be used by people on the ground for an, even more, safer control mechanism.

FEATURES

1. Web-based
2. Authenticated access
3. Runs on any browser or tablet
4. Integrates to standard smart switch device using LoRaWAN / NBIoT / LTE-m protocols
5. Realtime control and feedback to smart switches
6. Control Dashboards
7. Analytics Dashboards
8. Disinfection process
9. Ground staff application
10. Reports
11. Alerts

RUN-MODES

The application can run on different modes:

1. Simple controls
2. Controls with business processes integrated

ENTERPRISE AIoT PLATFORM

Spectrum UVC is a good starting point for enterprises who are undergoing IoT transformation as the application in itself can serve as the jump-off point for any other IoT applications to help enterprises gain real-time data and real-time controls across facilities.
