

THE CHALLENGE

Data security and governance are front of mind for IT security teams; this is accelerated by the growing attack surface of cloud environments, GenAI, and regulatory requirements. Modern organisations store more data than ever before, but face increasing challenges in managing its security lifecycle.

Purview, Microsoft's data security platform, is a powerful tool, but successful rollout comes with its own challenges. Issues such as staff skill shortages, confusion about best practices, the risk of unintended consequences and user disruption, and lack of awareness about what can even be achieved, are among the most frequently cited. Purview comprises a vast offering, including Information Protection, Data Loss Prevention, Insider Risk Management, Data Lifecycle Management, and more – driving questions like “Where do we start?”, “How do we do it right the first time”, and the need for expert-driven deployment.

THE SOLUTION

Threatscape's Purview Implementation Service is designed to accelerate the deployment and adoption of Microsoft Purview while ensuring alignment with best practice for security, governance, and compliance. The service enables organisations to follow tried and tested approaches, frameworks, configuration, and expert-led professional services to get the most out of Purview. Threatscape will help your organisation manage, secure, and gain insights from data across diverse environments, including on-premises systems, multi-cloud, and Software-as-a-Service (SaaS) platforms.

Regardless of your starting point or end objectives, the Purview Implementation Service ensures you'll start getting the most out of Purview through full license value realisation and data security optimisation. In regulated organisations, addressing data security weaknesses through the Purview Implementation Service will also assist you with meeting requirements for NIS2, Cyber Essentials, ISO, and other compliance obligations.

THE PROCESS

Data security and Purview is not one-size-fits-all. This is why our service begins with a thorough discovery and workshop phase to better outline the specific and nuanced requirements of your organisation.

Our Microsoft Security experts will assist you in implementing Purview to both recognised best practices and the particular concerns and requirements of your organisation. We will then gradually accelerate use of Purview in a safe and controlled manner, so that you can adapt it to your requirements without the risks of a 'big bang' deployment.

Accelerate Phase**

MICROSOFT PURVIEW

 Information Protection

 Data Loss Prevention

 Insider Risk Management

 Data Lifecycle Management

 Communication Compliance

 Compliance Manager

 eDiscovery

 Information Barriers

 Records Management

 DSPM & DSPM for AI

 Audit

 Unified Catalog

KEY BENEFITS

Achieve data security posture in line with best practice and regulatory requirements

Reduce risk of data security breaches with a balanced approach to business change

Engagement led by award-winning Microsoft security experts

Greater visibility and control of data security risks and operations

WHY CHOOSE THREATSCAPE?

We are the trusted security partner of enterprise clients who rely on us to secure critical IT assets in over 100 countries around the world. We are one of very few dedicated cyber security companies with a separate Microsoft Security Practice, and our expertise in this space is reflected in our status as a Microsoft Solutions Partner with three advanced specialisations, and our five Microsoft Security Partner of the Year wins, including the global award in 2020.
