TIBCO DQ
Data Quality Software

TIBCO DQ software accelerates enterprise data-quality initiatives by simplifying connectivity between systems and improving information exchange.

Make Better Decisions with Better Data

Improve MDM Results

Automatically profile and classify all sources of data contributing to your MDM solution. Apply pre-built validation and cleansing rules recommended by the engine to enhance ingestion workflows, increase the effectiveness of matching algorithms, and improve the accuracy of your data.

Maintain Quality as You Evolve

Avoid costly overruns using advanced data profiling, cleansing, and standardization as you upgrade to a new SaaS suite, move on-premises applications to the cloud, restructure data warehouses, or add new applications.

Reduce the Data Prep Burden

Consistently cleanse, standardize, deduplicate, and enrich raw data sources, providing business-ready datasets that drive all human and automated business decisions.

Consistently Enforce DQ Standards

Improve accuracy, reduce maintenance, and govern efficiently by implementing a data quality firewall. Using the TIBCO DQ catalog of re-usable APIs, consistently verify, correct, and enrich data right at the point of entry.

Why TIBCO DQ?

Available Anywhere

Available on premises or on the cloud, and highly interoperable.

Universally Accessible

Simple, self-service UIs for non-technical users, and a rich toolset for advanced users.

Fast Adoption & Value

Prebuilt rules and services for your industry that accelerate time to value and foster user adoption.

Reusable

Build once, reuse everywhere for ease, speed, and consistency.

AI-powered

AI-assisted engine activates metadata and recommends data quality workflows.

For more information on the broad capabilities provided by TIBCO DQ integration and the use cases it addresses, refer to the datasheet.
