

# Case Study • Health Insurance SAS to Open Source Migration

A large Top 10 North American health insurance enterprise was looking to migrate SAS code to Python on a modern analytics platform. Initial work was performed manually, before adding automated code conversion. With automation, significant timeline and cost savings were achieved.

Migration Timeline Reduced from:

1,200+  
SAS Scripts

1.5M+  
Lines of Code

6 FTE → 2 FTE

With automation, developers focus on integration testing and validation, not code conversion
